

## Freedom Ventures Custom “Tuned” Blackout Super Trojans 2022

The guns are based on a STI Master Series forged frame; the same frame used in STI’s DVC Classic. The frame is checkered on the front strap for extra grip. This frame is extra heavy to assist in recoil control and the trigger guard is squared for those that shoot with their weak index finger on the guard.

The Slide is an STI Trojan Slide, CNC’ed from Bar stock and has both front and rear serrations.

The Barrel is an STI 9mm Bushing Barrel; allowing the gun to be shot in both IPSC Classic division, USPSA Single Stack division and IDPA.

The Slide, Barrel and Frame were all fitted by IPSC Alex to have a tight fit while allowing reliability.

Here is a breakdown of all the high-end custom components used to build these guns.

<b>Frame</b>	STI Master Series
Plunger	STI
Bushings x4	STI
Mainspring Housing (Steel)	EGW
Pin Kit 1911	Dawson
