

# UNDERSTANDING THE IMPORTANCE OF OUR PATIENT RECORDS INITIATIVE

1. [The Mission](#) – Stop redundant paperwork and endless requests for health records transfer by storing and transferring your own health records securely on your phone for free.
2. [Precision Healthcare Technology](#) has both a free [Precision Health Access phone app](#) and Electronic Medical Records (EMR) system that can transfer these records without paper forms today. Precision is already in the background of nearly every sector in healthcare, so we are your perfect advocate.
3. [Problem](#) – Most likely your health records are scattered across the many password protected healthcare providers and hospitals that your family has seen over the years, and never in one place when you need them.
4. [Solution](#) – We are looking for 100+ million downloads of this free app so that you can securely store these records on your phone, and healthcare will have to change. We will give this technology free to the 600+ EMR companies but it will take your voice and demand, as demonstrated by your download. [Our nonprofit, PROACT](#) will deliver these Public Service Announcements (PSAs).
5. [Precedent](#) - In 2022 The European Union (EU) mandated that all device makers such as Apple and Samsung must use the same plug and charger, so that these would never have to be sold separately or be different from brand to brand.
6. [Win/Win Nobody Loses](#) –We own and offer our app, EMR, and transfer technology, all for free, so we have perfected the transfer mechanism that all EMRs can use, kind of like the EU and their common device plug measure.
7. [App and Storage will Always be FREE!](#) – We have many very large corporate partners who recognize that in this case, the best life and health assurance is actually free, and can be a matter of life and death in some cases. [Precision Life Benefits](#) connects you to access many health and life benefits on three tiers, 1) Free, 2) Subscriptions, 3) A la Carte. Thank you for joining our team. Together we will Change Healthcare to Lifecare.
