

THE BEST LIFE & HEALTH ASSURANCE IS FREE!

TOGETHER WE CAN CHANGE HEALTHCARE TO LIFECARE!

PROBLEM

Your health records are spread across the password protected patient portals of every healthcare provider you or your family has even seen.

Healthcare is not to blame, is not its fault, but rather the result of patient privacy laws.

SOLUTION

TODAY we have the technology to put these records on your phone for easy access by you for FREE! Everyone wins & no one is hurt by this movement!

PUBLIC SERVICE ANNOUNCEMENTS PSAs - OUR SOAPBOX

Suppose at noon eastern time on the first of each month, everyone in the world was to stand in the street and sing the same song really loud and together. No matter where you were or what you were doing you would hear these voices. That's how we get healthcare to change for US! NOW we can really move fast to make this a reality.

That reality is the information on your phone goes directly into their Electronic Health Records (EHR) systems instantly. Thank you in advance for your support. Together we can make this happen and happen fast. The day you download the app you can take a printed record to your next appointment. Not too long after that you will be able to make paperless transfers forever. No more filling out endless forms, signing requests to transfer and receive your own patient records, etc. All we need is one voice ... OURS!

Eric Topol, MD, in his book, "[The Patient Will See You Now](#)" describes such a world. I highly recommend this book as Dr. Topol is far ahead of his time with his visionary outlook. This is only a world that can be created by all of us working together.

The technology is in place today, as we helped architect it and build it. We make our money from healthcare, so for Precision this is not about making money at all, but rather causing great change for the good of mankind, hence the nonprofit, PROACT.

To further make this point, when was the last time you saw a nonprofit NOT seeking donations? Probably never. We do not! We own the technology and want to direct it to the benefit of an improved system, but

WE NEED YOUR VOICE!!

In this “Cancel Culture” world, standing on a soapbox and demanding your given rights for a good cause is the accepted norm. This is something exceptional that we can all do together and make a change very quickly. How?

The nonprofit message to the entire healthcare community (physicians, hospitals, healthcare organizations, employers, insurance companies, etc.) from the population at large is simple; *“Where do you stand on patient’s rights to own and store their personal medical records on their phones and devices outside of your password protected patient portals?”*

Now that we have said this, I want to say that healthcare is not the big bad wolf. In fact, they would love this change, but nobody has yet forced them to make it, and as we said, healthcare won’t change itself. We must get up on our soapbox and in a loud and consistent voice, demand this change. Healthcare organizations must go on record publicly with their stance to our demands. We will list those who do on our website and in our messaging.

In response to our joint challenge, healthcare should and will likely respond, *“We fully support these rights as this process makes it much easier for us to serve you. Our legal limitations in the past have been to protect your privacy, but there’s no reason you shouldn’t personally have control outside of our password protected portals. The Precision Health Access app is free and storage on your device is free, and we happily encourage you to take advantage of this empowerment tool.”*

ABOUT THE IMPORTANCE OF YOUR CONTROL OF HEALTH RECORDS

The Best Health & Life Assurance is FREE!

[Precision Health Access](#) is a free service that allows you to download, update, store, print, and transfer your health records on your phone. Tens of millions of dollars are spent monthly on unnecessary and wasteful tasks.

- Patients don’t like constantly filling out the same redundant paperwork at every facility.
- Doctors nor patients are served by delaying care and/or creating later visits because they need to request past medical records from another provider or facility where you have been treated in the past.
- By downloading and using our Precision Health Access app to store your health records, we can eliminate this together as the technology exists today.

Why is this important? Your records are stored across the many password protected patient portals of every healthcare provider or service you have ever seen. Because these all require separate logins for patient privacy reasons, this important information is not readily available to you in one place, such as your phone, when you need it. Now what if you could take your health record from our app on your phone and transfer it directly into the doctor or hospital system? Our technology can do this today, but we need your support to make sure that everyone demands this from healthcare.

How does Precision help? Our technology is already operating in the background of nearly every sector of healthcare. Because our platform sits on top of a comprehensive Electronic Medical Records (EMR) system, we know exactly what the requirements are for these data transfers. This makes us your perfect advocate.

How do we make this happen? We have partnerships with some major corporations who are behind our efforts to empower YOU to have this control. With 100+ million downloads, the same healthcare partners we already work with will happily adapt to accept your health records electronically. That is why the download and storage will always be free.

How is this FREE service being paid for? We own and have been in development of our technology since 2002. We make our money in healthcare, and it costs us very little to make this available to you for the greater good. That said, we offer completely optional health access services under [Precision Life Benefits](#). These are tiered services, many are free, a subscription, or an ala carte menu. Of 100+ million downloads is the win for healthcare and you, but we think you may like some of our other services, whether 1% or 10% ever choose to access any paid services. There is never a requirement or pressure to do so.

How do you get your patient records? Very simply you login to the physician or other healthcare provider’s patient portal and download or save a screenshare if no save function is available. You simply store this on your [Precision Health Access](#) app. Now you may print this out in advance of your next appointment, or very soon, you will be able to just transfer it from your phone to their EMR system.

What should be in my health records? Your “Currency” is your current data. Name, DOB, known diagnosis, medications, list of providers/facilities, latest assessments, lab tests, etc. Your insurance information if any, emergency contact people. In short, ALL the things you detest filling out and having to look up every time you go to an office. Now you have it one time, one place for you to update. Just print and take it with you, or transfer at the desk.

How do I get started? 1) Go to either Play Store or Apple Store to download the app or just go to [Precision Health Access](#). 2) Download the app and register. 3) The first health record you should complete, and store is the Health Risk Assessment. 4) Check out all the tiles and options on your home screen. 5) Login into your provider/facility patient portal and start saving your records to your app. 6) Complete your information in the Medical History section.
