

New 4-Digit TARA STOP WATCH MODULE

The **New 4-Digit TARA Stop Watch Module** with Stop Switch allows you to accurately time your starts so you can improve your Hole-Shot time. This timer is accurate to .01 seconds from 0 to 99.99 seconds and comes with a standard 20-foot long 2-foot wide stop switch. When the Green Light lights on either your AGC-4 or AGC-4P the timer starts. When you run over the yellow stop switch or pass through the beam of the optional Infrared Stop switch placed some distance away, the timer stops. The stop switch uses a standard ¼" stereo phono plug and extension cables can be bought at any electronics supplier to increase the distance to your desired length.

Features

Accurately times your Starts to .01 seconds!

Can be used with the standard one-man Stop Switch or an optional Infrared photo switch for multiple riders!

Works with TARA AGC-3P, AGC-4, AGC-4P and most AGC-3 Models!

WARNING! BEFORE USING, YOU MUST FOLLOW THE TARA STOP SWITCH MOUNTING INSTRUCTIONS LISTED BELOW. FAILURE TO MOUNT AS INSTRUCTED WILL CAUSE DAMAGE TO THE YELLOW STOP SWITCH AND WILL VOID THE WARRANTY. REPLACEMENT STOP SWITCH WILL COST \$85.00 OR MORE TO REPLACE! NEVER RUN OVER THE YELLOW STOP SWITCH WHEN IT IS NOT MOUNTED!

TARA Stop Switch Mounting

Always have the Stop Switch flat on the ground. You can screw the switch to a board or a strip of wood through the mounting holes shown in the image below, or you can use some long skinny nails through the holes to hold the switch flat in the dirt.

Never run over the switch when it is twisted or otherwise not flat to the ground as it will damage the switch and void the warranty.
