## BUILDING VALUES

For over 30 years, Basalite® has worked on growing our business by building relationships.

We have created strong bonds with our dealers, masons, architects, engineers and licensed contractors. From working together with the common purpose of installing the finest hardscape products available, we have seen our products placed in settings that range from practical to magical. At Basalite®, we are committed to being the best in the industry. Our focus now, just as it was when we opened our doors all those years ago, is on service, quality and innovation. Those are the values that have made us the industry leader we are today and the same principles that will guide us far into the future.

## INSPIRING OUTDOOR SPACES

Hardscape projects of all types and sizes come to life using Basalite® materials. With our large selection of products, colors and textures, that outdoor living space you've been dreaming of installing can become reality.

Left and above: Italian Renaissance pavers and Italian Renaissance Circle Kit in Positano

### QUALITY ASSURANCE

All of our products are manufactured to meet or exceed industry specifications. Our commitment to quality ensures consistent product strength and durability that will withstand the test of time and the elements.

### EASE OF INSTALLATION

Basalite® hardscapes can be installed by a do-it-yourselfer, or by a professional hardscape contractor. For installation instructions, visit us online at [www.basalite.com](http://www.basalite.com) or visit a dealer near you.

### LOW MAINTENANCE

Pavers require less maintenance than other paving materials. Their strength, durability and mortarless design eliminate the patching and resurfacing frequently required when asphalt, poured or stamped concrete is used.

### LONG LIFE

Pavers are stronger and more durable than asphalt, poured concrete, and stamped concrete and are built to handle the daily weight stresses of vehicle and pedestrian traffic.

### SPECIAL ORDERS

Custom manufactured colors are available by special order. For more information, including lead time and order minimums, please contact your local Basalite dealer.

**New!**  
Ready-to assemble outdoor living kits!

**NECESSARIES OUTDOOR LIVING KITS**  
Transform your outdoor living area to a backyard destination with the Necessaries kits by Basalite. ## DRIVEWAYS

Gain dramatic appeal by combining unique textures, colors and styles that complement your home's exterior. Shown: Italian Renaissance pavers in Positano.

# ITALIAN RENAISSANCE

Interlocking Paving Stones

The Italian Renaissance collection recreates the textured surface and hand-cobbled appearance of stone slab roads once naturally antiqued by carriage wheels and horses' hooves.

Above and Right: Italian Renaissance pavers in Positano

# ARTISAN SLATE

Interlocking Paving Stones

This sleek collection easily complements any home or landscape. Artisan Slate's subtle texture and natural beauty provide the look of real stone, with the strength and durability of an interlocking paving stone.

## ACCESSORY ITEMS

### Sakrete<sup>®</sup> Paver Set<sup>®</sup> Polymeric Sand

Sakrete Paver Set Polymeric Sand is a mixture of sand and special additives for paving stone joints. Engineered to resist wind, rain, freezing conditions and substratemovement without washing away. Available in a 60 lb bag.

### GST Low Sheen Wet Look Lacquer Sealer

GST Low Sheen Lacquer Sealer is a solvent-based, low sheen, crystal clear, deep penetrating sealer designed for decorative concrete, paving stone and natural stone surfaces, to enhance and beautify their natural color.

### Hardscape Zone Adhesive

Hardscape Zone Adhesive is the strongest adhesive of its kind. It is formulated for retaining walls, pavers, block, masonry, concrete, aluminum, steel and most common landscaping materials. Available in 10 oz and 28 oz tubes.

### Aluminum Paver Restraints and Landscape Spikes

StructurEdge™ is a permanent, aluminum paving restraint system that is designed to out-perform plastic, PVC and steel systems. Its tightfitting L-shaped design promotes healthy turf and accommodates irrigation heads. StructurEdge readily forms to curves, radii and angles, as well as straight lines, allowing wide installation flexibility.

## Compact Bar with Grill

Kit includes: pre-cut block, instructions, Ultra Chef stainless/cast iron, three burner 59,000 BTU grill with infrared rear rotisserie burner and 570 sq. in. cooking area, steel reinforcements, adhesive. Weight: 2070 lbs.

## Compact Bar Front Open

Kit includes: pre-cut block, instructions and adhesive. Weight: 2820 lbs.

## Compact Bar Front Closed

Kit includes: pre-cut block, instructions and adhesive. Weight: 2820 lbs.

## Dining Table

Kit includes: pre-cut block, instructions, steel reinforcements and adhesive. Weight: 2860 lbs.

## Pub Table

Kit includes: pre-cut block, 36" octagon limestone table top, instructions and adhesive. Weight: 1505 lbs.

## Bistro Table

Kit includes: pre-cut block, 36" octagon limestone table top, instructions and adhesive. Weight: 1505 lbs.

## SPECIFICATIONS

## Grand Waterfall

Kit includes: pre-cut block, instructions, 1350 gph mag drive pump, 48" square basin and all connections, 23" stainless steel spillway, steel reinforcements, adhesive and gloves. Weight: 3465 lbs.

## Compact Waterfall

Kit includes: pre-cut block, instructions, 850 gph mag drive pump, 26" square basin, 11" stainless steel spillway, steel reinforcements, adhesive and gloves. Weight: 1650 lbs.

## 20 inch Column with Glass

Kit includes: pre-cut block, instructions, adhesive and Pittsburgh Corning® Premiere glass block. Weight: 1140 lbs.

## 20 inch Column

Kit includes: pre-cut block, instructions and adhesive. Weight: 1250 lbs.

## 24 inch Column

Kit includes: pre-cut block, instructions and adhesive. Weight: 1655 lbs.

## Lakeland Seatwall

Kit includes: pre-cut block, instructions and adhesive. Weight: 1060 lbs.

## Riverland Seatwall

Kit includes: pre-cut block, instructions and adhesive. Weight: 1390 lbs.

# PATTERNS

The following paver patterns are just a few possibilities that can be achieved by using Basalite pavers. Visit [www.basalite.com](http://www.basalite.com) for more pattern options.

## Interlace

70% rectangle and 30% square

For use with Italian Renaissance, Country Cobble, San Francisco Cobblestone and Permeable Italian Renaissance pavers.

## Random One

40% mega, 20% rectangle and 40% square

For use with Italian Renaissance, Country Cobble, San Francisco Cobblestone and Artisan Slate pavers.

## Random Two

29% Mega, 42% rectangle and 29% square

For use with Italian Renaissance, Country Cobble, San Francisco Cobblestone and Artisan Slate pavers.

## Herringbone

100% rectangle

For use with Italian Renaissance, Country Cobble, San Francisco Cobblestone, Artisan Slate Premier Series, Mission and Permeable Italian Renaissance pavers.

## Heartland

For use with Heartland pavers.

## Herringbone Flagstone

37.5% Mega, 37.5% rectangle and 25% square

For use with Artisan Slate pavers.

## Water Drainage

Spacer on stone

For use with SF Rima.

## Turf Growth

Spacer on spacer

## Square Running Bond

100% square

For use with Italian Renaissance, Country Cobble, San Francisco Cobblestone, Artisan Slate Premier Series and Permeable Italian Renaissance pavers.

## Rectangle Running Bond

100% rectangle

For use with Italian Renaissance, Country Cobble, San Francisco Cobblestone, Artisan Slate Premier Series, Mission, Permeable Mission and Permeable Italian Renaissance pavers.

## Basket Weave

100% rectangle

For use with Artisan Slate Premier Series and Mission paver.

## Double Basket Weave

100% rectangle

For use with Artisan Slate Premier Series and Mission paver.

## Flagstone

For use with Artisan Flagstone. Spacers and alignment grooves make installation easy.

## 6 Foot Circle Kit

## 9 Foot Circle Kit

## Pinwheel

80% 6x12 and 20% 6x6

For use with Artisan Slate Premier Series pavers.

## Blend

60% 12x12 and 40% 6x12

For use with Artisan Slate Premier Series pavers.

## Plaid

45% 12x12, 45% 6x12 and 10% 6x6

For use with Artisan Slate Premier Series pavers.

## Herringbone Blend

66% 6x12 and 34% 6x6

For use with Artisan Slate Premier Series pavers.

# PATTERNS

# INSTALLATION INSTRUCTIONS

\*The installation instructions and illustrations shown are a basic overview of paver and wall installation methods. Because installation methods vary per product, please refer to the Basalite product specific installation guide, the Standard ICPI installation method, ICPI.org or visit [www.basalite.com](http://www.basalite.com).

## Typical Paver Installation\*

1. Excavate unsuitable, unstable or unconsolidated subgrade material and compact the area which has been cleared. Backfill and level with dense graded aggregate suitable for base material (typically 3"-6" for pedestrian/light vehicular traffic and 8"-10" for driveway applications), or as otherwise directed by site engineer/architect/landscape architect.
2. Install edge restraint using concrete curb, concrete toe or edging.
3. Place bedding course of sharp, normal-weight screening or concrete sand to a uniform depth of approximately 1" leveled to grade.
4. Install Basalite Pavers hand tight with joints approximately 1/8". Where required, cut stones with an approved cutter to fit accurately.
5. Tamp pavers with mechanical vibrator, uniformly level, true to grade and free of movement. Textured pavers require a rubber pad for the vibrator to reduce scuffing.
6. Fill voids in joints by sweeping dry, fine, sharp sand over pavers.

## Permeable Paver Installation\*

1. Excavate unsuitable, unstable or unconsolidated subgrade material and compact the area in accordance to ICPI guidelines. Backfill and level Sub-base with No. 2 aggregate 2-1/2" crushed. Backfill and level base layer with No. 57 aggregate 3/4" crushed. The joint material and the foundation (paver bed, subbase, subgrade) must be permeable. 60mm thick pavers may be used in pedestrian applications.
2. Install edge restraint using concrete curb, concrete toe or edging.
3. Place bedding course of No. 8 aggregate 3/8" leveled to grade.
4. Install Pavers in closed assembly with spacer on stone for water drainage. Fill joints with gravel. Where required, cut stones with an approved cutter to fit accurately.
5. Tamp pavers with mechanical vibrator, uniformly level, true to grade and free of movement. Textured pavers require a rubber pad for the vibrator to reduce scuffing.
6. Fill voids in joints by sweeping dry ASTM No. 8, 89 or 9 stones.

# INSTALLATION INSTRUCTIONS

\*The Bayfield Retaining Wall System can be used for gravity walls up to 3 feet high, including buried course, but excluding the cap. Taller walls can be built with the Retaining Wall System using geosynthetic reinforcement when designed by a qualified engineer. Height assumes level backfill and clean, compacted sand or gravel and no surcharge. The Bayfield® Freestanding Wall System can be used for walls up to 3 feet high, including buried course, but excluding the cap.

## Typical Retaining Wall Installation\*

**A. Prepare Base Leveling Pad**  
Excavate for the leveling pad. The trench should be at least 12 inches wider than the block you are installing and 6 inches deeper than the height of the block. Use a compactable base material of 3/4-inch minus (with fines) for the leveling pad. The pad must extend at least 6 inches in front of and behind the first course of block, and be at least 6 inches deep

after compaction. If the planned grade along the wall front will change elevation, the leveling pad may be stepped up in 6-inch increments to match the grade change. Start at the lowest level and work upward whenever possible. Compact the aggregate and make sure it's level front to back and side to side. Mist lightly with water before compaction.

**B. Base Course**  
Begin laying block at the lowest elevation of the wall. For quick-leveling, use the Torpedo™ base block with the hand-holds down, or you can remove the rear lip of the block by hitting from the back so it will lie flat on the leveling pad. Place the first block level, front to back and side to side; lay subsequent blocks in the same manner, flush against each other.

Make sure they are in full contact with the leveling pad. If the wall is on an incline, don't slope the blocks; step them up so they remain consistently level. For multiple-piece products, use the largest unit, 18 inches wide, for the base course. Complete the base course before proceeding to the second course. A drainage pipe should be placed at rear base of first course.

**C. Stacking and Fill**  
Place the second course of blocks on top of the base course. Remember to keep the wall on bond by placing units in a staggered relationship to the course beneath. Pull each block forward as far as possible to ensure the correct setback. Backfill with drainage aggregate directly behind the block, adding 6 inches at a time, followed by proper compaction. Add soil fill behind the aggregate. Compact before the next course is laid. With the top units dry and clean, stack the caps on top of the final row and use a masonry construction adhesive such as Hardscape Zone adhesive.

## StoneWall II Installation\*

**A. Prepare Base Leveling Pad**  
Excavate trench 20" wide and 12" deep along the length of wall, assuring depth provides proper unit embedment. On sloped sites, step up 6" to change elevation. Place 6" of 3/4"-1/2" crushed aggregate in the trench. Level, then compact to 95% or greater of standard proctor.

**B. Set & Align Base Course**  
Starting at lowest elevation, ideally a corner, place and level the block using a string line and 2' level. Follow the suggested patterns as shown, or create your own. Make sure the recess next to the center core is placed top up. Place alignment plugs into the center core following the guidelines below. Lay out the entire bottom course before proceeding to the next courses. Place perforated drain pipe onto leveling pad, behind base course (retaining wall) then backfill, 12" deep, to top of wall with crushed aggregate. Stack additional courses altering the pattern course to course. Repeat the steps to reach the desired wall.

**C. 3-Way Alignment Plug (3WAP)**  
After stacking the block course, place a 3WAP into the core of each unit, assuring that the flange on the plug rests within the recess adjacent to the core. Orient the plug to achieve your desired wall batter. Use the setback position for retaining walls to achieve a 7.3 degree batter, the vertical position for bench walls, and the reveal position to occasionally highlight a unit.

**D. Capping the Wall**  
Adhere clean and dry cap blocks to the wall using silicon concrete construction adhesive. Place cap flush to the wall face or with an overhang.
