

California Energy Partners (CEP) offers to save your facility, with 3 phase Roof Top Units (RTU's) 17-80% of your monthly electrical utilization.

Most savings are in the 40-60% range.

Your ROI is usually under 2 years. Most are 1.2-1.4 years.

The installation and savings are rebated by PG&E (like their lighting program).

How do we do it?

Your HVAC facility(s) is analyzed and profiled against your yearly electrical history (supplied by PG&E).

Your individual RTU(s) performance is/are determined, the cooling capabilities are characterized.

We evaluate your statements for rates and Kw hours.

We deliver a proposal with guaranteed savings and costs.

We insert controls on your RTU's to modulate fans and **PUMPS (no one else does this)**.

We install a state of the art Building Management System (BMS).

How do we guarantee it?

After we show the monthly savings, we guarantee 80% of the calculated, forecasted savings.

We will pay you the difference between our forecasted savings and the actual savings.

Each RTU has a data logger. This means you will know how much you save in detail.

You can reset to your "native" (old) control settings, to confirm efficiency/rates at any time.

Anything Else?

Lots more: Occupancy analysis, CO2 monitoring, wireless controllers, cloud controls, Artificial Intelligence, remote control/management, full environmental dashboards, projected thermal usage, data logging, increased MTBF, forecasted maintenance, increased equipment warranty, and more. Let us tell you about the system?
