Transient facial nerve paralysis (Bell's palsy) following administration of hepatitis B recombinant vaccine: a case report

R Paul ¹, L F A Stassen ²**Affiliations**PMID: 24457866 DOI: [10.1038/sj.bdj.2014.1](https://doi.org/10.1038/sj.bdj.2014.1)

Abstract

Bell's palsy is the sudden onset of unilateral transient paralysis of facial muscles resulting from dysfunction of the seventh cranial nerve. Presented here is a 26-year-old female patient with right lower motor neurone facial palsy following hepatitis B vaccination. Readers' attention is drawn to an uncommon cause of Bell's palsy, as a possible rare complication of hepatitis B vaccination, and steps taken to manage such a presentation.
