Thermo Scientific Brand Message

Transition of Acros Organics, Alfa Aesar and Maybridge brands to Thermo Scientific

We had several exciting changes regarding our products and brands . Effective October 2021, we have consolidated our product portfolio and transitioning the Acros Organics™, Alfa Aesar™ and Maybridge™ brands to one single brand, Thermo Scientific™. These changes have been made to simplify the product and service offering and provide our customers with one complete portfolio

Since October 2021, our Acros Organics, Alfa Aesar and Maybridge products have been branded Thermo Scientific

New Brand, Same Trusted Formula

To simplify your buying experience, we have consolidated the Alfa Aesar™, Acros Organics™ & Maybridge™ brands under the Thermo Scientific brand

Some of the key changes we have implemented are:

Brand Transition

- Acros Organics, Alfa Aesar and Maybridge branded products have transitioned to the Thermo Scientific brand.
- All products packed and labeled from October 2021 onwards have been branded Thermo Scientific.
- There is no re-labelling of existing product on our shelves. Until existing stock of Acros Organics and Alfa Aesar labeled products are depleted, there will be a mixture of Acros Organics, Alfa Aesar and Thermo Scientific branded products in your order.
- All product documentation will transition to Thermo Fisher Scientific branding.
- All product caps will transition to the color red, in alignment with the overall theme of the Thermo Scientific brand. Again, until product stocks are depleted, you may see a mixture of products with both the old and new cap colors.

Product Portfolio

- We have already started the process of removing items with very low and zero historical demand from the portfolio.
- Subsequently, to address product overlap from each brand, some products from the Acros Organics, Alfa Aesar and Maybridge brands will be removed from the portfolio. In these instances, alternative products will be identified and offered as replacements. This step will be completed in the first half of 2022.

Product Continuity

- All remaining products will retain their current product codes – these will not change.
- We would like to reassure you one more time that the specification, quality and performance of the products will not change.

If you have any questions, please contact your local customer support team.

CertiQ™ GC Secondary Reference Standard

ThermoFisher offers CertiQ GC Secondary Reference Standard for various chromatographic and analytical applications. USP & EP allow the use of secondary standards which are traceable to the primary standards from USP & EP. CertiQ secondary GC standards are cost-effective & convenient alternative to the primary standards and allow laboratories to focus resources on their core activities rather than preparing internal working standards.

CertiQ™ standards are traceable to the current lots of the United States Pharmacopeia (USP) & EP. CertiQ™ offers an comprehensive COA with entire characterization data:

- Traceability Assay – this is a comparative assay that demonstrates direct traceability to the corresponding Pharmacopeial Standards current batches.
- Certified Purity – mass balance
- Identification Test by IR
- 1H NMR
- Water Determination

What more!!! CertiQ GC Secondary Reference Standard comes with AcroSeal™ packaging which is an industry-leading packaging solution which helps keep the purity & moisture content of these solvents intact.

AcroSeal™ packaging keeps the solvent quality intact before, during usage, and until the last drop. If you require a large amount of solvent remove the whole cap under an inert atmosphere and decant the desired amount of product from the bottle.

New and Improved Optima[®] LC/MS Solvents

New and Improved Optima[®] LC/MS Solvents

- **Less impurities:** Innovative LC-UV gradient test ensures that UV-absorbing impurities will not interfere with your analysis
- **Less particulates:** ≤ 0.1 micron filtration
 - protects columns and components from clogging
 - Formulated for **UHPLC-UV applications**

Improved Performance

Optima[®] LC/MS solvents now lead the industry with an unprecedented LC-UV gradient suitability specification that was developed by using advanced UHPLC technology coupled with PDA detection optics. As a result, each lot of Optima LC/MS solvent is screened for UV-absorbing contaminants at every wavelength in the 200-400nm range to afford smooth baselines, reduced interferences, and increased confidence in your analyses.

In addition, Optima[®] LC/MS solvents are formulated for UHPLC-UV which requires the mobile phase to be free of contaminating particulates and UV-absorbing impurities. Our high purity solvents are submicron filtered (0.1 μm) to minimize troublesome particles that may interfere with UHPLC system performance and provide an ideal solution to prepare cleaner, particle-free, mobile phase blends for UHPLC.

Competitive Advantage

- Optimized for UHPLC-UV. Novel gradient elution test in the full UV range (200-400nm) ensures **extremely low levels of UV-absorbing impurities**
- Sub-micron filtration of Optima[®] LC/MS solvents prolongs the life and effectiveness of UHPLC components such as inlet filters, check valves & seals, injectors and columns by **reducing instrument downtime and maintenance cost**
- Filtration feature provides **very low particle content for maximum purity**

Globally Harmonized System (GHS) of Classification & Labelling of Chemicals

With consistent and appropriate information on the chemicals either produced or imported into the country, the infrastructure to control chemical exposures, protect people and environment can be established in a comprehensive manner. GHS helps in providing an internationally comprehensible system for enhanced protection of human health and environment.

Information on GHS Label :

Label Elements: Each hazard class details the label elements that include symbol, signal word and hazard statement assigned to each of the hazard categories of the GHS.

Pictograms and Reproduction of the Hazard Pictograms: A pictogram means a graphical composition that includes a symbol plus other graphic elements, such as a border, background pattern or colour that is intended to convey specific information.

Shape and Colour: All hazard pictograms used in the GHS should be in the shape of a square set at a point.

Signal Words: This indicates the relative level of severity of hazard and alerts the reader to a potential hazard through the label. Danger and warning are the standard signal words used in GHS. Danger is used for severe hazard categories, whereas warning is used for less severe categories.

Reproduction of the Symbol: It is mandatory to use standard symbols in GHS. *(Refer diagram below)*

Acutely toxic

Oxidizer

Gas under pressure

Corrosive

Explosive

Acutely toxic (Harmful)

Flammable

Health Hazard

Toxic to aquatic life

Hazard Statements: These are phrases, assigned to a hazard class and category to describe the nature and degree of the product hazards. The tables of label elements in the individual chapters for each hazard class detail the hazard statements that have been assigned to each of the hazard categories of the GHS.

Precautionary Statements and Pictograms: A phrase and/or pictogram on GHS label are used to describe recommended measures to be taken in order to minimize or prevent the adverse effects that result from exposure, improper storage or handling of hazardous product. GHS label should include appropriate precautionary information, the choice for which lies with a competent authority.

Product Identifier: The product identifier used on a GHS label must match with the product identifier used on the Safety Data Sheet (SDS). This system also makes it mandatory to include chemical identity of the substance on the label.

Supplier Identification: The name, address and telephone number of the manufacturer or supplier of the substance or mixture should be provided on the label.

Trace Elemental Analysis

Fisher Chemical Optima[®] Acids

The highest purity of acids and bases for ultra-trace metal analysis. All products are certified below 100 parts per trillion (ppt or pg/g) with critical impurities specified at 1 ppt level. This range contains the fewest trace metallic impurities of any other acid. Our Optima[®] Acids are tested for up to 65 elements at ppt levels using the Thermo Scientific[™] Element[™] 2 High Resolution ICP-MS.

Packaging Highlights

Acids are packaged in either a fluorinated ethylene propylene resin bottle or a perfluoroalkoxy resin bottle with HCl and HF (to avoid vapor permeability issues).

- **Reliable** – Bottled in Class 10 clean room environment and individually double-bagged in Class 100 clean room to ensure product quality
- **Convenient** – Each bottle is individually packaged for easier and safer handling

Fisher GC-HS Solvents

New

Fisher Chemical solvents for GC headspace applications

High purity solvents for accurate and reliable analysis of organic volatile impurities (OVIs) by gas chromatography headspace (GC-HS).

The technique requires extraction of residual solvents from the sample using a high purity solvent free of contaminants that could interfere with GC analysis by co-eluting with the peaks of interest. ICH guidelines include maximum concentration limits for Class 1, Class 2, and Class 3 residual solvents (most to least toxic, respectively). Fisher Chemical's GC Headspace solvents are performance tested to ensure absence of trace level ICH residual solvents.

- Processed to high purity for accurate and repeatable determination of trace levels of Class 1, Class 2, and Class 3 residual solvents in pharmaceuticals
- Tested by UV absorbance to ensure low organic contamination
- Processed for low water content to facilitate the extraction of OVIs
- Packaged in an inert atmosphere to maximise shelf life in unopened containers

The perfect choice for cleaning solutions.

Cleaning laboratory glassware is important because contaminated or stained glassware can lead to inaccurate results in your analysis. Everything that comes in contact with chemicals or biological substances must be free from impurities, both before and after use.

Labolene is a reliable cleaning agent with consistent and proven composition, that ensures proper scientific working procedures and avoids frequent modification of processes and applications.

Labolene is supplied as a liquid concentrate, for dilution with water.

Recommended for use in labs conducting micro-phosphate tests, for manual cleaning, or for use in ultrasonic cleaning bath.

Product Introductions

Tetrabutylammonium Hydroxide 40% suitable for ion chromatography:

Tetrabutylammonium Hydroxide (40 % In water) is widely used reagent as a Regeneration Solution in Cation Non suppressed applications on Ion Chromatography.

As a reagent for ion-pair extractions Tetra-n-butylammonium hydroxide, aq. solution is used as a phase-transfer catalyst in organic synthesis especially for alkylation and condensation reactions.

Tetraheptylammonium Bromide:

Tetraheptylammonium bromide is a quaternary ammonium compound (QAC) mainly used as a phase-transfer agent.

Tetra-n-heptylammonium bromide is used as a mobile phase for the separation of a series of glucosinolates by reversed-phase ion-pair liquid chromatography. It acts as an ion pair reagent, which is used in the extraction of molybdenum complexes into toluene film. Further, it is used in organic synthesis. It is also used in coatings, printing ink, rubber, glass, leather and cosmetics.

Fisher Chemical Solvents for UHPLC Gradient Grade Analysis

New Solvents

For over 40 years, we have been producing a full range of Fisher Chemical high purity solvents that set the standard for high sensitivity and provide accurate, reproducible, high resolution analytical separations.

We have raised the bar by introducing a unique range of UHPLC Gradient Grade Solvents.

Our solvents have an extraordinarily low solvent filtration of 0.1 μm , ensuring low baseline noise and reducing pump blockages. Perfect for those working at high pressure, where high sensitivity and a fast run rate are key to successful analysis.

In addition to a low filtration, our solvents display a remarkably high UV transmission rate making them the ideal solvent for UHPLC applications using UV detection.

SOLVENTS KEY FEATURES

- Outstanding high UV transmission
- Interference free, low baseline noise at 210 nm and 254 nm
- Low acidity & alkalinity level
- Filtered through 0.1 μm filter

Combining our solvents with a UHPLC pump allows one to undertake different types of applications, a fast run rate at high pressure and increase the volume of a run at higher performance levels.

UHPLC System

The UHPLC (Ultra High Pressure Liquid Chromatography) pump has become an indispensable instrument to get shorter run times while maintaining chromatography integrity.

Thermo Scientific Liquid Chromatography systems offer UHPLC compatibility across all modules, ensuring maximum performance for all users and all laboratories. Our systems cover flows from 20 nL/min to 10 mL/min and operating pressures up to 1,250 bar.

We provide a wide range of pumping, sampling, and detection modules and a large suite of integrated features which increase application flexibility and efficiency. These systems improve the productivity of any laboratory, from routine industrial QA/QC to advanced drug discovery.

We recommend UHPLC Gradient Grade solvents for all UHPLC applications using UV detection.

UHPLC ADVANTAGES

- Faster results and method development
- Improved resolution
- Increased relative sensitivity

UltiMate 3000 Rapid Separation System

Potassium bromide, For IR Spectroscopy, CertiFied

Used widely as infrared optical windows and components for general spectroscopy because it is transparent from the near ultraviolet to long-wave infrared wavelengths and has no significant optical absorption lines in its high transmission region.

Potassium bromide, For IR Spectroscopy,

CertiFied is prepared in such a way that it is sufficient for the preparation of perfectly good pellets without the need for further pre-treatment and the associated risk of contamination. It also retains its powdery form over a period of years if stored in an air-tight condition.

Features :

- Does not exhibit inherent contamination absorption bands
- Produces a completely homogeneous & transparent pellet upon mixing with analyte
- Ease of Handling, retains its powdery form over a period of years if stored in an air-tight condition

Silica Gel Orange

Silica Gel blue, the most commonly used laboratory desiccant contains Cobalt Chloride as the indicator and poses health risks and environmental issues.

Cobalt Chloride has been classified by IARC (International Agency for Research on Cancer) in Group 2B, which states Cobalt Chloride is possibly carcinogenic to humans, very toxic to aquatic organisms and may cause long term adverse effects in the environment.

Solvent Use in Gas Chromatography

Unlike liquid chromatography (LC), solvents are almost never injected directly into a gas chromatograph (GC)

They are used to extract the mixtures of interest to allow the subsequent GC analysis. Even though they are not being injected directly into the instrument, the purity of the extraction solvent needs to match that needed by the detector, like in LC.

Qualigens GC Solvents are supplied with GC analysis & are specially developed and tested for use with Electron capture detector (ECD) and flame ionization detector (FID)

Our solvents are developed specially for sample preparation in GC. Ideally suited for all GC applications including sensitive detection tasks in residue and environmental analysis.

Our GC solvent qualities are ideal for all gas chromatography applications. Solvents range specified for pharma, pesticides and petroleum residues analysis.

**Qualigens GC solvents offer you
the security and reliability needed for today's GC applications**

Key Features:

- Specified for ECD and FID detectors
- Extremely low residual impurities
- Supplied with Certificate of Analysis

Application:

- Pesticide analysis
- Organic residue analysis
- Pharma

Thermo Scientific brand product line focuses on high quality reagents:

Precious metal compounds and homogeneous catalysts

Available is a full range of precious metal salts and solutions manufactured to stringent specifications. Homogeneous catalysis provides an excellent choice where highly specific reactions are desired including chiral transformations. Our homogeneous catalysts can be used in a wide range of chemical transformations.

Catalysts in varying purities and concentrations

Due to their high selectivity, precious metal chemicals are often the first choice as heterogeneous catalysts for a wide variety of reactions, including hydrogenation, hydrosilylation, isomerization and carbonylation. There is a wide selection of purities and concentrations for a broad range of applications, including organic synthesis in the pharmaceutical industry available. We offer a unique collection of chiral ligands for asymmetric hydrogenation, novel palladium coupling catalysts, platinum group metal (PGM)-based heterogeneous catalysts as well as Sponge Nickel catalysts.

Also included in the Thermo Scientific portfolio of catalysts are fuel cell catalysts for anodes, cathodes and electrodes as well as metal scavenger products. To read more about the offerings

AcroSeal™

Drier reagents for longer stability

When using air and moisture-sensitive solvents and reagents, it is essential that these products are not only as dry as possible when you first use them, but they should remain dry in storage as well. Through the innovative quadrant-style screw cap and specially designed septum, AcroSeal™ packaging ensures that you have access to high-quality and low moisture products every use, guaranteeing improved yield & consistency of your research experiments while reducing chemical waste.

Key Highlights of AcroSeal™ Packaging

- **New septum** developed from a polymeric elastomer with an inert fluoropolymer-coated surface, preserves product quality for longer with better re-seal around needle punctures.

- **Red butyl rubber septum** is used on our organometallics, reagents in solution & organics products because it provides excellent chemical resistance to these products.

- **Adhesive-free septum** reduces the risk of contamination.
- **Multiple screw thread windings** in the inner septum holding cap minimize the risk of moisture ingress between cap & bottle.

- **Inner septum holding cap rim design** supports & stretches the septum, reducing the risk of bulging or deformation.

- **Large surface area** allows easier access for a second needle to replace the nitrogen blanket during use & prevents the need to puncture the same spot twice.

- **Cushioning liner** in outer protective cap re-seals perfectly even after the septum has been pierced multiple times.

- **Tamper-evident seal** indicates if the product has already been opened.

- **Easy cap removal** ensures effortless access to large volumes of product.

Product No.: 13836
Arsenic Plasma Standard

Certified Concentration of As: 1003 ± 7 µg/mL (989.0 ± 7.0 µg/g) Lot No.: 285106
Matrix: 5% HNO₃ Expiry Date: September 30, 2024

Intended Use: This solution is intended for use as a certified reference material or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), x-ray fluorescence spectroscopy (XRF), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured and certified under an ISO 9001, ISO/IEC 17025, and ISO 17034 quality management system. This CRM was prepared to a nominal concentration of 1000 µg/mL by gravimetric methods using 99.99% pure arsenic (As) metal dissolved in high purity nitric acid (HNO₃) and diluted with filtered (0.22µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration and uncertainty were determined using the "High Performance ICP-OES" protocol developed by NIST and both the certified concentration and uncertainty values are traceable to NIST SRM 3103a, lot #100618. The uncertainty associated with the certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Uncertified Values: ICP-MS was used to determine trace metal concentrations for this product (nd = not determined).

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) use a minimum sub-sample size of 500µL, (4) make dilutions using calibrated balances or certified volumetric class A flasks and pipettes, (5) dilute with the same matrix as the original CRM, and (6) never pour used product back into the original container. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or expose to direct sunlight. Minimize exposure to moisture or high humidity.

Period of Validity: Alfa Aesar guarantees the accuracy of this Specpure® solution until the expiry date shown above, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Specialty Particles

Dyed Particles

Develop high-quality, highly sensitive Point of Care diagnostic assays with Thermo Scientific™ Color-Rich™ dyed beads. Our internal dyeing methods provide exceptional color saturation, prevent dye leaching in aqueous media, leave the surface free for covalent coupling, and enable maximum immunological reactivity.

Flow Cytometry Particles

Ensure optimal flow cytometer instrument performance by using Thermo Scientific™ Flow Cytometry beads for calibration, alignment, counting, and instrument set-up to ensure flow and optical stability and for developing assays used for the simultaneous detection and quantitation of up to 24 different analytes within a sample.

Size Standard Particles

Rely upon Thermo Scientific™ NIST Traceable Size Standards as a third party reference to calibrate and check performance when particle sizing instruments are used for solving real-world analytical problems.

Count Control Particles

Validate the results of particle counters with Thermo Scientific™ Count Controls to make sure they are measuring particulate matter with utmost accuracy. This is critical wherever air, surface, or liquid contamination is a concern and requires diligent monitoring.

Fluorescent Particles

Develop highly sensitive and accurate lateral flow assays and tests with Thermo Scientific™ Fluoro-Max™ fluorescent beads. Available in a wide range of sizes and colors, these beads are internally dyed to ensure maximum color brilliance, visibility, and color saturation, prevent leaching for optimum stability, and provide a dye-free surface for coupling.

Specialty Particles

Achieve precise performance and accurate results in specialized research and industrial applications with Thermo Scientific™ beads for optimizing assays, for analyzing particulate materials of various sizes, and for testing smoke detectors and filtration media.

4D Series Duke Standards Dry Microsphere Size Standards

Calibrate air particle counters for pharma, healthcare, biotech and electronics

- Mean size standard uncertainty of 2.5% enables calibration of air particle counters to ISO 21501-4 regulations
- Superior uniformity provides exact calibration point when setting the calibration curve
- Diameter traceable to NIST, a known government standard
- Certificate of Traceability provides objective evidence for QC compliance

The 4D Series is the first dry bead specifically designed to meet the ISO 21501-4 international standard for improving the repeatability and reproducibility of air particle counters.

Thermo Scientific™ 4D Series Duke Standards™ Dry Microsphere Size Standards are designed with a calibration uncertainty that is less than or equal to 2.5% of the mean diameter, enabling them to be used to calibrate airborne optical particle counters (OPC) in compliance with ISO 21501-4.

These beads come with a Certificate of Calibration and Traceability to the National Institute of Standards and Technology (NIST), providing the documentation needed for QC/regulatory programs and audits.

Available in 3 m, 5 m, 7 m and 10 m diameters, these dry polymer beads are ideal for OPC instrument manufacturers and service providers working to the ISO standard, as well as pharmaceutical and biotech companies manufacturing products with ISO 21501-4 certified OPCs in a ISO 14644 classified cleanroom.

The ISO 21501 standard delivers a calibration method designed to improve the repeatability and reproducibility of air particle counters. It deals comprehensively with statistical uncertainty and defines limits to a set of performance parameters which must be covered in routine periodic calibration.

Conformance to ISO 21501- 4 ensures that air particle counter instruments 1) size particles correctly to an acceptable uncertainty level, and 2) count particles accurately to a defined counting efficiency level.

ISO 14644 is a widely used standard for cleanroom classification using OPCs.

The 4D Series comes conveniently packaged in dropper-tipped bottles to enable direct dispensing of the beads into the sampling chamber of the OPC.
