

aria™

style without compromise

A Formica Group Product

style without compromise

Introducing Aria™ - our most iconic surface yet.

By combining the visual beauty of natural materials with a highly engineered development process, we have created an elegant, high performing surface that will stand up to whatever life may throw at it.

Classic bold designs incorporate marble veining, granite textures or engineered stone patterns in a colour palette of sophisticated neutrals. Aria gives you the scope to create the kitchen you've always dreamed of.

Manufactured as a single slab, the solid construction is waterproof and gives consistent colour throughout.

Aria provides the same aspirational, clean, visual appeal of natural or engineered stone; but without the associated expense or complexity of install.

We believe your kitchen worktop should have a unique style, be hard wearing and require little maintenance. Aria has been specifically designed to give the sleek and contemporary kitchen you've always wanted, with the highest durability to give you that peace of mind but at a price that doesn't mean you need to compromise on looks or surface performance.

properties

From the outset, Aria has been developed as a real alternative to natural and engineered stone, without having to compromise on the aesthetic, finish, quality or durability of such work surfaces. Available in a wide range of contemporary and classic designs to enhance any home, Aria offers these outstanding properties:

Durable

Aria's solid one piece construction means it is highly impact and abrasion resistant, which is perfectly suited to surviving the toil of day-to-day life.

Heat resistant

Aria worktops are heat resistant to a maximum of 160 degrees Celsius, providing you with the protection you need from boiling liquids and hot surfaces.

Non-porous

A fully waterproof worktop enables you to add curves, chamfer edges and have drainage grooves added - ideal for incorporating design features such as under-mounted sinks. Due to its non-porous properties, Aria's surface is resistant to stains from everyday products.

Hygienic

Liquids cannot penetrate the surface, making it easy to wipe away spillages. This combined with its inert properties stops bacteria and mould from taking hold.

Simple and low cost installation

Aria worktops can be cut on site and installed using standard tools, which eliminates the time and expense of complex measuring and installation equipment usually associated with stone and engineered stone alternatives.

inspiration and style

Aria Worktops transform your kitchen into the chic, modern living space you've always desired. With the solid grace of a natural surface, style favourites can be cut and shaped with a clean finish, creating a stylish environment with your worktops as the striking centerpiece.

Contemporary slim-line design

Modern manufacturing capabilities enables Aria to be manufactured with two different thicknesses: ultra slim 12mm for a sleek, modern design effect or a more classic 20mm thickness, resembling engineered stone for that sophisticated look.

Flush kitchen designs

Aria worktops gracefully complement traditional and modern kitchen designs, allowing you to match with recessed handle rails for handle-less kitchen designs. The optimised sizes we have created on our worktops and islands allow for personalised features including an overhang, curves or flush fitted kitchens.

Making it personal

With a solid colour core and waterproof structure, an Aria worktop allows for an under mounted sink. Complementary drainage grooves can be routed into this surface to expose the natural colour matched core to take contemporary design to a new level.

Create a cascading waterfall effect island as a design statement, incorporating beautiful clean lines for effortless design resulting in a bold focal point in your kitchen.

Beautiful look and complementary feel

Pulling inspiration from an array of natural materials, five textures have been selected by our global design team, marrying perfectly to the pure and simple style palette of the Aria surface. The result is a beautiful effect giving you the option to keep the look minimalistic or opt for bold touches of your own interior finesse.

Timeless colour and design palette

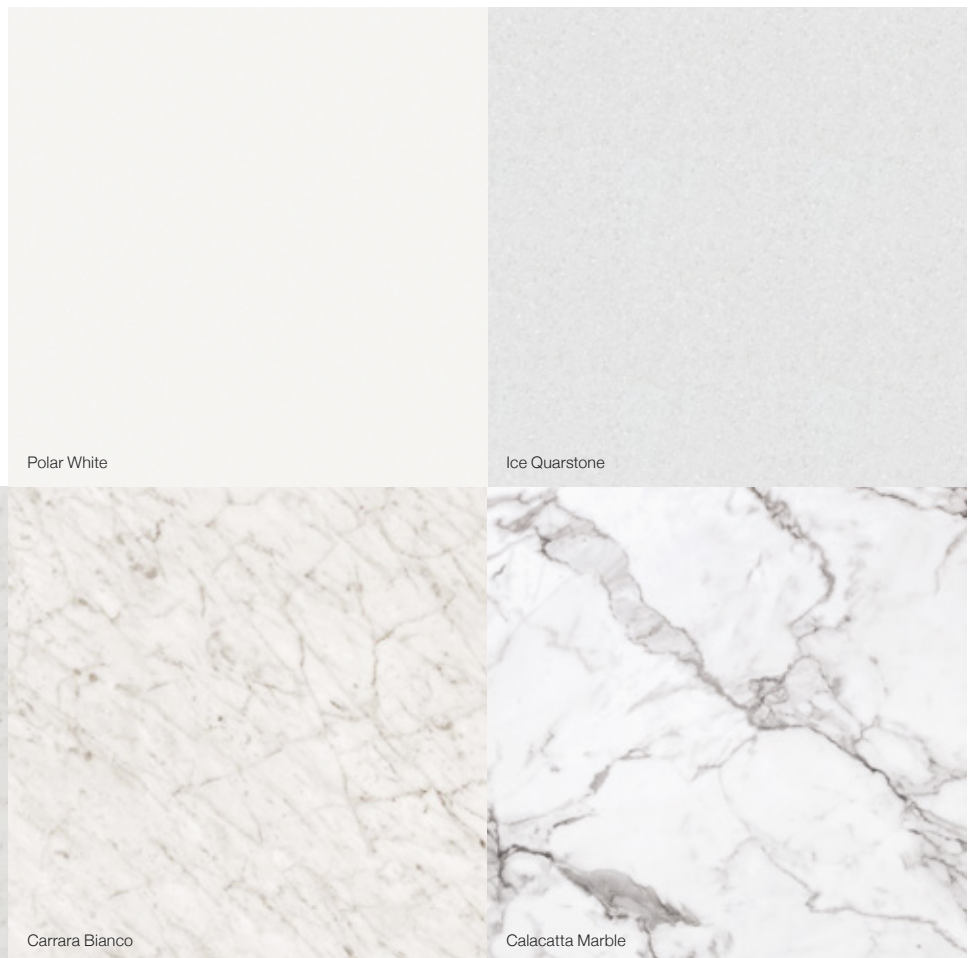

Our combination of stone, marble and granite effect surfaces are paired with white, grey or black cores for an unassuming style. From subtle specks to sophisticated marble veining, a choice of fifteen decors from around the world is incorporated into Aria worktop styles, which are manufactured in the UK.

natural whites

Add a touch of timeless elegance to your kitchen with our range of cool whites featuring a variety of natural stone and engineered stone designs.

Versatile and universally popular, white suits all rooms and future-proofs your kitchen for years to come. This palette also features satin and textured finishes for a low reflective look that is subtle but sophisticated.

Polar White
Calacatta Marble

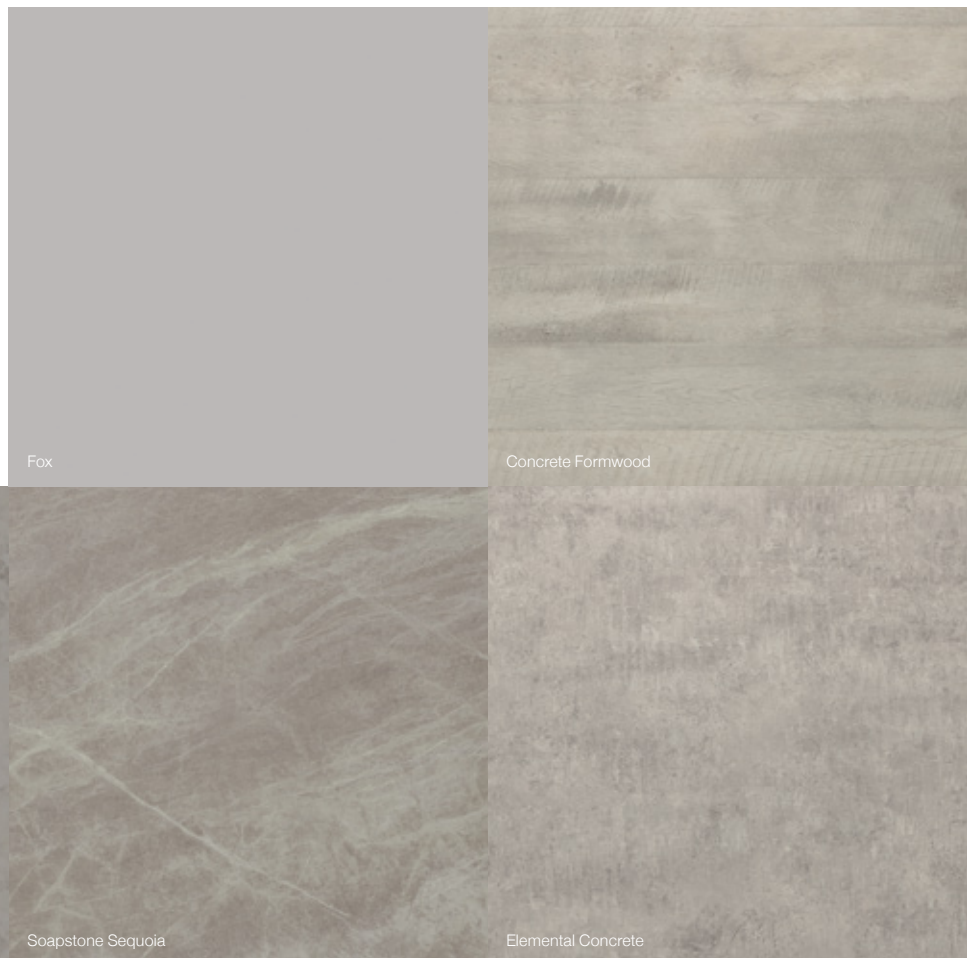

cool greys

On trend and arguably the most popular choice of home colour - grey.

Perfectly neutral, harmonious, and effortlessly cool, greys immediately enhance all others colours around it. Make the rest of your kitchen's design features pop by cleverly using a colour that takes a back-seat, and lets complementary accents take centre stage.

Choose from a range of finishes and textures to instantly add flair and sophistication to your home and create a tonally soothing ambience.

peace of mind

Quality assured

All Aria products are manufactured in accordance with British and European standards to ensure they meet exacting modern kitchen requirements. Specific features incorporated into the surface increase their resistance to heat, impact, moisture and scratching (excluding the low gloss Satin NDF finish).

10 year guarantee

This guarantee covers any Aria product (worktop, breakfast bar, island, upstand, downstand, splashback) found to be defective in either material or manufacture from the date of its installation. Swatch samples represent only a small area of an actual Aria worktop, therefore colour and surface finish should be compatibility checked before your Aria products are fitted, as claims cannot be accepted for re-fitting resulting from a mismatch of colour or surface finish. An installation and maintenance guide is supplied with every worktop; this must be kept by the end user to validate any guarantees.

Ease of maintenance

Aria worktops have a non-porous surface which is resistant to stains, mould and bacterial growth. This makes Aria products very easy to maintain and keep clean. They simply require a regular wipe down with a moist cloth and mild detergent, then rinsed with warm water and the surface gently dried with a soft cloth. While our surface is resistant to many substances, our recommendation is to wipe up any spillages immediately and not leave them to stand for a prolonged period. Should you choose to incorporate under mounted sinks or drainage grooves into your worktop design, these edges and channels should be wiped down as instructed above on a daily basis to maintain their pristine look and appeal.

UK manufacturing at its best

All Aria products from this range are produced in the UK, benefitting from a heritage which spans decades and the expertise of a global leader in quality surfaces. The Aria range, like all our other products, are manufactured using innovative techniques, leading technology and by knowledgeable experts, so you can be sure that it delivers and lives up to its reputation.
