

# My MD Hub

## One Health Record. **Four** Levels of Value.

My MD Hub gives consumers free access and control of their own health records—while giving providers and organizations the intelligence to turn information into better care.

### FOR THE CONSUMER **Control**

Your health information follows you—not the healthcare system.

- ✓ Access all your records in one place
- ✓ Understand what they mean
- ✓ Share only what's needed
- ✓ Track what has been sent and received

**The value:**  
Better information.  
Less repetition. Greater choice.  
Your records, available when you need them.

### FOR THE PROVIDER **Better Care**

Stop practicing with pieces of the patient's history.

- ✓ More complete patient information
- ✓ Fewer missing records
- ✓ Better continuity of care
- ✓ Intelligence that connects records to what's needed next

**The value:**  
Better information leads to better decisions, better care, and better outcomes.

### FOR THE ORGANIZATION **Efficiency + Intelligence**

Stop chasing records across disconnected systems.

- ✓ One place to request, receive, review and share records
- ✓ Real-time eligibility and status tracking
- ✓ Operational visibility across the workflow
- ✓ Works with your existing systems

**The value:**  
Less administrative friction. Greater visibility.  
Better coordination. Lower cost.  
More time for what matters most.

### FOR HEALTHCARE **Connectivity**

The consumer becomes the connection between otherwise disconnected systems.

**The value:**  
One connected ecosystem.  
Better coordination. Better population health.  
Lower overall cost. Better experience for all.

## My MD Hub

Your Health. Your Records.  
**Your Control.**

SECURE • PRIVATE • INTEROPERABLE

Powered by Precision Stealth  
Workflow Intelligence

## The Power of Connection

When the consumer controls their health records, information can move **securely** to where it's needed—when it's needed.

### How My MD Hub Works – Six Simple Steps, One Intelligent Workflow

#### 01 Claim Request

Start every claim from one controlled workflow, not scattered portals.

#### 02 Record Results

See the record in context so the next service action is obvious.

#### 03 Request to Share

Share only what is needed, with a clear purpose and documented request.

#### 04 Shared Status

Track what was shared, when it moved, and what still needs attention.

#### 05 Eligibility

Check eligibility from the same workflow driving medically necessary care.

#### 06 Complete Visibility

One view of what happened, what's pending, and what comes next.

**TRUSTED. SECURE. COMPLIANT.**  
Built with industry-leading security, privacy and interoperability standards.

**My MD Hub doesn't create another health record. It puts the records healthcare has already created into the hands of the one person they all have in common—YOU.**

Precision / YOUiversal Care then helps turn that information into what matters most: **what should happen next.**

**APPROVED & VETTED**  
Approved for inclusion in the CMS Medicare App Library and validated by the CARIN Alliance.

### Better for Everyone. Better for Healthcare.

I control my health information.

I have better information to care for my patient.

We spend less time finding information and more time using it.

The consumer is the connection between previously disconnected healthcare systems.
