

Physicians are losing out on hundreds of thousands of dollars annually in missed mandated value-based metrics and population health assessments not supported by their EHRs.

Our initial Practice Analysis record for a physician achieving best practice potential is only 8%!

Most physicians think that they are already doing these things via their EHRs. Not true! The EHR is a forensic tool only telling the practice what they did, and not the hundreds of individual patient's medical necessities they missed. Only our platform can identify new medical necessities within the results of each encounter, and then our staff of nearly 10,000 NPs and PAs does the work for you.

Precision Value Based Management owns the very technology that grades and ranks physicians for payers, hospital systems and ACOs. We know exactly what is expected of each physician practice, and the medical ongoing necessities for every individual patient. For example, even if you did Annual Wellness Visits/AWV and Health Risk Assessments/HRA for every patient, you will still be penalized for failing to act on medical necessities found within those results. Physicians are completely unaware this is even happening. Only our platform can identify these deficiencies, engage your patients, and drive this missed revenue.

Benefits to the physician:

1. Engage entire patient population with one click rather than waiting for them to appear on your office schedule. Scaled up revenue NOW!
2. There is no upfront cost, and nothing is owed until after insurance pays on the Provider Model.
3. ZERO burden on your office staff. We run a "Shadow Clinic" performing all of your required services in the background on your behalf, away from your office workflow.
4. EXAMPLE – Every Medicare patient requires certain assessment bundles annually that reimburse \$679.02 total. Medicare will pay you in 14 days
5. Already have an in-house program such as CCM, RPM, Sleep, Allergy, ANS, etc.? We can grow those for you as well by identifying medical necessity and then engaging your patients to enroll.

Ready to learn how much money you are leaving on the table each year?

Our lowest amount missed by a single provider is \$554,559.26. The only thing worse than missing out this revenue is being penalized for not taking it. That's exactly what happens, and providers are largely unaware as no EHR has these capabilities. Thank you in advance!
