

Precision Value Based Management

Getting Started with Precision Boost

[For Contract Link Click Here](#)

Thank you for reviewing our program information. Before we start, let me remind you that value based and population health compliance is not an optional outside service, but rather mandated services you are required to provide to your patients or face financial penalties.

We greatly extend the capabilities of your EHR by contacting your entire active patient population via email and text at once rather than waiting on them to have an appointment in your office. This generates much needed revenue now without the same burden on your office space and staff.

Our Simple Process

1. On day one **Precision** will access your EHR for patient demographics (or you may send us the requested reports), problem/diagnosis lists and medications.
2. You get a complimentary overview of your practice and your potential for missed revenue.
3. Our technology identifies all patients due, coming due, or overdue for mandated services.
4. We will then contact those patients via email and text and provide them a link to the assessments they are due for. [Please click here for sample text](#). This is all done in the comfort of their own homes without taking up your office and staff resources.
5. To complete the task an MA may share these results with the patient in your office or you may choose to have a PA or NP do so via telemedicine. OR, you can select for us to perform all of these tasks on your behalf.
6. Every week for three weeks another email/text will be sent reminding the patient of the need to comply with these assessments. Our message is urgent and direct for best compliance.
7. On the third notification, if still no response an office visit will be requested. This will greatly benefit the practice as most of these patients aren't on your current office visit schedule, maybe not for months.
8. If you have other programs like CCM, RPM, sleep, allergy, ANS, etc., we will screen to see what patients are eligible for these services (and not yet enrolled) and contact them with the appropriate medical necessity questionnaire. Upon receipt we will have an enrollment message and link for you to sign them up. Again, this is done remotely away from your office and staff.
9. In your office you may use paper assessments in English or Spanish that we provide. You may also provide tablets (\$99 on Amazon) where the patient can link directly into our system. These written assessments allow you to begin earning revenue in 15 minutes of your signed contract.
10. We will provide results of all assessments and their required "Health Scores" to you in order to share with your patients. All results and notes will be resident in our platform as well.
11. We will send your biller a bundle or batch file for all activity done through our/your system.
12. Precision serves as your Navigator and support system, working with your office daily.

Download Your Contract

Please let me know if you have any questions. [Please click here to download your contract](#) and send it to me at doug@precisionvbm.com and we will begin immediately. We will be unable to start until we receive this information. Thank you so much!

Precision Value Based Management

Signage & Email/Text Notifications

Below is the message your patients will receive. Please feel free to edit. The points are clear and there is an urgency and consequence built in. You are responsible for getting this information or face financial penalties. This is not an option, but it is a great revenue opportunity. Remember your initial Medicare bundle pays about \$400 each in 14 days.

In addition to this being the email and text message to your patient population, I will send you this content as a sign for you to place in your waiting room, every treatment room, the break room etc. Everyone needs to remind everyone to follow up and assure this message is delivered consistently to patients daily throughout the year.

2020 PATIENT ASSESSMENT REQUIREMENTS

NEW RULES for 2020

1. As of 2020 ALL insurance companies including Medicare and Medicaid now require their patients to complete a short assessment series annually.
2. Failure to do so will create financial penalties for the physician.
3. Failure of the patient to complete these required assessments will temporarily limit some access to patient services such as prescription refills and other orders may be delayed.
4. There is no cost to the patient, as no deductible or copay is required.
5. It's important to you and your family that we stay ahead of potential health risks!
6. Please respond promptly to your Personal Health Coach.

Thank you in advance!
