It's no secret. The threat of electronic detection and cyber attack is inherent while conducting operations. It is V1 Solution's mission to ensure our nation's top operators are educated and equipped with the latest tools and methodologies to remain vigilant and confident that their data and communications are protected. With our experience developing and delivering USG-certified courseware in support of official Communications Programs of Record, your team will increase its operational effectiveness, whether CONUS or OCONUS. Our technicians will train your personnel standard digital forensics counter-measures, encryption software, and data hiding techniques. We will high-light the vulnerabilities associated with unencrypted 802.11 Wi-Fi, cellular phone networks, and how to mitigate those risks. Additionally, our staff offers training in digital signature reduction, so a team of personnel is able to communicate securely while minimizing their overt signature. This training is perfect for personnel traveling to semi-permissive or non-permissive environments.

Example of Course Offerings:

Open Source Intelligence (OSINT)

Information Security (INFOSEC)

Existing Threats

Windows Cleanup

Encrypted Volumes / Data Hiding

Safe Internet Browsing

Virtual Private Network (VPN) Basics

Wireless Security

Third-Party Operating Systems

Encrypted Comms Applications

Cellular Concepts

Cellular Vulnerabilities

Electronic Access Tool Demos
