Airborne Intelligence, Surveillance, & Reconnaissance (A-ISR) is at the forefront of strategic and tactical-level intelligence gathering. The capability to collect real-time intelligence and to push that data off board in near-real time for decision makers requires a well-oiled mechanism consisting of relevant technology and well-trained operators. V1 Solutions' key leadership has wide-ranging experience supplying Full-Motion Video (FMV) and Moving Target Indicator (MTI) radar support in addition to Signals Intelligence (SIGINT) to both Conventional and Special Operations Forces units in multiple theaters around the globe. With many of our instructors having Joint Terminal Attack Controller (JTAC) or ISR Tactical Controller (ITC) qualifications, our ISR SME's can provide your personnel with the most up-to-date Tactics, Techniques, & Procedures (TTP) from the field. Learn how to properly integrate FMV into your collection plan and identify the appropriate methodologies for Processing, Exploitation, and Dissemination (PED).

ISR Capabilities:

Airborne / Remote Sensor Operators

FMV / MTI training

JTAC training

ITC training

ISR PED operators & training

Multi-INT collection & training

ISR systems integration

Aircraft configuration consulting

ISR utilization consulting

UAS / CUAS operations

Exercise support

Basic ISR course (pre-deployment)
