

iQagent makes your plant floor a data rich environment

iQagent uses QR Codes (or your existing asset tags) to recognize equipment and process areas on your plant floor. We call these *Points of Interest*, or POIs. Our mobile apps scan these to display relevant data from your existing plant systems, including **live process data** from your PLC, HMI, or SCADA, schematics, documents, forms, videos and other resources from your existing PMMS and document management systems.

iQagent can also help you resolve unplanned downtime events faster through better communication with remote technical staff. Our patented holistic snapshot and recording features allow you to capture live video, process data, documents, on screen notes and audio and share them with remote technicians for quick problem analysis and resolution without requiring them to be onsite.

See iQagent work now on your own mobile device!

iQagent's internal 'demo' mode lets you see our great features instantly on your own device! Just cut out the demo QRs on the next page into cards, and laminate if desired. Then, download and launch iQagent on your [supported mobile device](#) and scan one to see simulated process data, documents, forms and videos on each POI. You can also see iQagent in action on our [YouTube channel!](#) Call us at 770.754.0427 or [contact us](#) to see how **iQagent make your plant floor more efficient.**
