

YOUR NETWORKS, YOUR DATA OUR MONITORING AND EXPERTISE

Daily cybersecurity quality happens in a SOC
- a Security Operations Center.

A SOC's a busy place - lots of computer equipment, even more data. Here's what you'll gain by engaging with MCCoE for SOC services.

CONTINUOUS MONITORING

- 24/7 monitoring of your network and also where it's open to the world. Every day, all day.
- Expert analysis of cybersecurity alerts – and escalation where needed.
- Early detection and response to cybersecurity threats and incidents.
- Ongoing key, detailed risk mitigation efforts, addressing many types of compliance.

STRATEGIZE CYBERSECURITY

- Know your security posture, and plan to strengthen where you're vulnerable by analyzing collected data.
- Improve your cyber defenses, and measure that improvement.
- Reduce the risk of a successful cyberattack.
- Couple this daily monitoring with regular cybersecurity assessments, another MCCoE service.

Missouri Cybersecurity Center of Excellence's SOC monitoring drives the results listed above while training students and early practitioners in the core concepts of cybersecurity defense. Monitoring everyday network data gains new meaning.
