

*Isaac Newton.*

MEMOIRS  
OF THE  
LIFE, WRITINGS, AND DISCOVERIES  
OF  
SIR ISAAC NEWTON.

BY  
SIR DAVID BREWSTER, K.H.,  
A.M., D.C.L., F.R.S., VICE-PRES. R.S., EDINBURGH, AND M.R.I.A.,  
ONE OF THE EIGHT ASSOCIATES OF THE IMPERIAL INSTITUTE OF FRANCE—HONORARY OR CORRESPONDING  
MEMBER OF THE ACADEMIES OF ST. PETERSBURGH, VIENNA, BERLIN, COPENHAGEN, STOCKHOLM,  
MUNICH, GÖTTINGEN, BRUSSELS, HARELEM, BRISTOL, CANTON DE VAUD, MODÈNE,  
WASHINGTON, NEW YORK, BOSTON, QUEBEC, CAPE TOWN, &c., &c.—  
CHEVALIER OF THE PRUSSIAN ORDER OF MERIT OF FREDERICK  
THE GREAT, AND PRINCIPAL OF THE UNITED COLLEGES OF  
ST. SALVATOR AND ST. LEOPARD'S, ST. ANDREWS.

*Regis vixit, et aeterni perit, et aeterni  
Proculdubio longe aeternum in mente mundi  
Alqua nona transiens pergit in mente aeterna.*  
LONDON, 1830.

VOL. I.

EDINBURGH: THOMAS CONSTABLE AND CO.  
HAMILTON, ADAMS, AND CO., LONDON.  
MDCCCLV.

## CONTENTS OF VOLUME I.

### CHAPTER I.

PAGE

Great Discoveries previous to the Birth of Sir Isaac Newton—Pre-eminence of his Reputation—The Interest attached to the Study of his Life and Writings—His Birth and Parentage—An only and Posthumous Child—Notice of his Descent—Inherits the small Property of Woolsthorpe—His Mother marries again—Is sent to a Day-school—His Education at Grantham School—His idle Habits there—His Love of Mechanical Pursuits—His Windmill, Water-clock, Self-moving Carriage, and Kites—His Attachment to Miss Storey—His Love of Drawing and Poetry—His Unfitness to be a Farmer—His Dial, Water-wheels, and Anemometer—Leaves Grantham School—His Commonplace Book and College Expenses, . . .

1-18

### CHAPTER II.

Newton enters Trinity College, Cambridge—Origin of his Love of Mathematics—Studies Descartes' Geometry, and the Writings of Schooten and Wallis—Is driven from Cambridge by the Plague—Observes Lunar Halos in 1664—Takes his Degree of B.A. in 1665—Discovers Fluxions in the same Year—His first Speculations on Gravity—Purchases a Prism to study Colours—Revises Barrow's Optical Lectures, but does not correct his erroneous Opinions about Colours—Is elected a Minor Fellow of Trinity in 1667, and a Major Fellow in 1668—Takes his Degree of M.A.—His Note-Book, with his Expenses from 1666 to 1669—Makes a small Reflecting Telescope—His Letter of Advice to Francis Aston, when going upon his Travels—His Chemical Studies—His Taste for Alchemy—His Paper on Fluxions sent to Barrow and Collins in 1669, . . .

19-36

### CHAPTER III.

Newton succeeds Barrow in the Lucasian Chair—Hyperbolic Lenses proposed by Descartes and Others—Opinions of Descartes and Isaac Voasius on Colours—Newton discovers the Composition of White Light, and the different Refrangibility of the Rays that compose it—Having discovered the Cause of the Imperfection of Refracting Telescopes, he attempts the Construction of Reflecting Ones—Constructs a second Reflecting Telescope in 1688, which is examined by the Royal Society, and shewn to the King—Discussions respecting the Gregorian, Newtonian, and Cassegrainian Telescopes—James Gregory the Inventor of the Reflecting Telescope

—Attempts to construct one—Newton makes a Speculum of Silvered Glass—Glass Specula by Short in 1730, and Airy in 1822—Hadley constructs two fine Reflecting Telescopes—Telescopes by Bradley, Molynaux, and Hawke—Short's Reflecting Telescopes with Metallic Specula—Magnificent Telescope of Sir Wm. Herschel with a four feet Speculum—Munificence of George III.—Astronomical Discoveries of Sir Wm. Herschel—Telescopes of Sir J. Herschel and Mr. Ramage—Gigantic Telescope of the Earl of Rosse with a six feet Speculum—Progress of Telescopic Discovery—Proposal to send a fine Telescope to a Southern Climate, . . .

57-67

## CHAPTER IV.

Newton writes Notes on Kinkhuysen's Algebra—and on Harmonic and Infinite Series—Delivers Optical Lectures at Cambridge—Is elected a Fellow of the Royal Society—Communicates to them his Discoveries on the different Refrangibility and Nature of Light—Popular Account of them—They involve him in various Controversies—His Dispute with Pardies—With Linus—With Gascoigne and Lucas—The Influence of these Disputes on his Mind—His Controversy with Dr. Hooke and Monsieur Huygens, arising from their Attachment to the Undulatory Theory of Light—Harassed with these Discussions he resolves to publish nothing more on Optics—Intimates to Oldenburg his Resolution to withdraw from the Royal Society from his Inability to make the Weekly Payments—The Council agree to dispense with these Payments—He is allowed by a Royal Grant to hold his Fellowship along with the Lucasian Chair without taking Orders—Hardship of his Situation in being obliged to plead Poverty to the Royal Society—Draws up a Scheme for extending the Royal Society, by paying certain of its Members—The Scheme was found among his Papers—Soundness of his Views relative to the Endowment of Science by the Nation—Arguments in support of them, . . .

68-108

## CHAPTER V.

Mistake of Newton in supposing the length of the Spectra to be the same in all Bodies—And in despairing of the Improvement of Refracting Telescopes—In his Controversy with Lucas he was on the eve of discovering the different dispersive Powers of Bodies—Mr. Chester More Hall makes this Discovery, and constructs Achromatic Telescopes, but does not publish his Discovery—Mr. Dollond rediscovers the Principle of the Achromatic Telescope, and takes out a Patent—Principle of the Achromatic Telescope explained—Dr. Blair's Aplanatic Telescopes—Great Improvements on the Achromatic Telescope by the Flint Glass of Guinand, Fraunhofer, and Bontemps—Mistake of Newton in forming his Spectrum from the Sun's Disc—Dark Lines in the Spectrum—Newton's Analysis of the Spectrum incorrect—New Analysis of the Spectrum by Absorption, &c., defended against the Objections of Helmholtz, Bernard, and Others—Change in the Refrangibility of Light maintained by Professor Stokes—Objections to his Theory, . . .

109-128

## CHAPTER VI.

Newton on the Cause of the Moon's Libration—is occupied with the subject of Planting Cedar Trees—Sends to Oldenburg his Discourse on Light and Colours, containing his Hypothesis concerning Light—Views of Descartes and Hooke, who adopt the Hypothesis of an Ether, the vibrations of which produce Light—Rejected by Newton, who proposes a Modification of it, but solely as an illustration of his Views, and not as a Truth—Light is neither Ether, nor its vibrating Motion—Corpuscles from the Sun act upon the Ether—Hooke claims Newton's Hypothesis as contained in his Micrographia—Discussions on the subject—Hooke's Letter to Newton proposing a Private Discussion as more suitable—Newton's Reply to this Letter, acknowledging the value of Hooke's Discoveries—Oldenburg the cause of the differences between Hooke and Newton—Newton's Letter to Boyle on the subject of Ether—His conjecture on the Cause of Gravity—Newton supposed to have abandoned the Emission Theory—Dr. Young's supposition incorrect—Newton's mature judgment in favour of the Emission Theory, . . .

127-150

## CHAPTER VII.

Newton's Hypothesis of Refraction and Reflexion—Of Transparency and Opacity—Hypothesis of Colours—The Spectrum supposed to be divided like a Musical String—Incorrectness of this Speculation—Hooke's Observations on the Colours of Thin Plates explained by the vibrations produced in the Ether by the Luminous Corpuscles—Hooke claims this Theory as contained in his Micrographia—Newton's Researches on the Colours of Thin Plates—Previous Observations of Boyle—Hooke's elaborate Experiments on these Colours—His Explanation of them—Dr. Young's Observations upon them—Newton acknowledges his obligations to Hooke—Newton's Analysis of the Colours seen between two Object-Glasses—Corrections of it by MM. Provostayes and Desains—Newton's Theory of Fits of easy Reflexion and Transmission—Singular Phenomenon in the Fracture of a Quartz Crystal—Newton's Observations on the Colours of Thick Plates—Recent Experiments on the same subject, . . .

151-174

## CHAPTER VIII.

Influence of Colour in the Material World—Newton's Theory of the Colours of Natural Bodies—Coloured Bodies reflect only Light of their own Colour, absorbing all the other parts of White Light—The Colours of Natural Bodies are those of Thin Plates—The transparent parts reflecting one Colour and transmitting another—Arrangement of the Colours exhibited in Natural Bodies into Seven Classes—Coloured Juices and Solutions, Oxidated Films, Metals, &c., &c.—Newton's Theory applicable only to one class of Colours—Objections to it stated—Mr. Jamin's Researches on the Colours of Metals—Cause of Colours must be in the

Constitution of Bodies—Examples of the Effect of Heat upon Rubies and Nitrous Gas—Effect of Sudden Cooling—On Phosphorus—Effect of Mechanical Action on Iodide of Mercury—Indication of a New Theory—And of the Cause of the Absorption of Definite Rays—Illustration of these Views in a remarkable Tourmaline, 175-192

## CHAPTER IX.

Newton's Discoveries on the Inflexion of Light—Previous Researches of Hooke—Newton's Animadversions on them offensive to Hooke—Newton's Theory of Inflexion as described by Grimaldi, having made no experiments of his own—Discoveries of Grimaldi, which anticipate those of Hooke—Hooke suggests the Doctrine of Interference—Newton's Experiments on Inflexion—His Views upon the subject unsettled—Modern Researches—Dr. Young discovers the Law of Interference—Discoveries of Fresnel and Arago—Fraunhofer's Experiments—Diffraction by Grooved Surfaces—Diffraction by Transparent Lines—Phenomena of Negative Diffraction—Experiments and Discoveries of Lord Brougham—Explanation of Diffraction by the Undulatory Theory, 193-210

## CHAPTER X.

Miscellaneous Optical Researches of Newton—His Experiments on the Absolute Refractive Powers of Bodies—More Recent Experiments—His Conjecture respecting the Inflammability of the Diamond, confirmed by more direct Experiments—His Erroneous Law of Double Refraction—His Observations on the Polarity of Doubly Refracted Images—Discoveries on Double Refraction in the present Century—His Experiments on the Eye of a Sheep—Results of them—His Three Letters on Briggs's New Theory of Vision—His Theory of the Semi-Decussation of the Optic Nerves—Partly anticipated by Rohault—Opinions of later writers on Vision, of Haid, Brown, Wollaston, Twining, and Alcock, discussed—The true Laws of Sensation and Vision—Newton's Observations on the Impression of Strong Light upon the Retina—More recent Observations—His Reflecting Sextant—His Reflecting Microscope—His Reflecting Prism for Reflecting Telescopes—His Method of varying the Magnifying Power of Newtonian Telescopes—Newton's Treatise on Optics—His *Lectures Opticæ*, 211-240

## CHAPTER XI.

Astronomical Discoveries of Newton—Combined exertion necessary for the completion of Great Discoveries—Sketch of the History of Astronomy previous to the time of Newton—Discoveries of Nicolas Copernicus, born 1473, died 1543—He places the Sun in the Centre of the System—His Work on the Revolutions of the Heavenly Bodies, printed at the expense of Cardinal Schonberg, and dedicated to Pope Paul III.—Tycho Brahe, born 1546, died 1601—His Observatory of Uraniburg—Is visited by

James VI.—Is persecuted by the Danish Minister—Retires to Germany—His Discoveries and Instruments—The Tychoonic System—John Kepler, born 1571, died 1631—His Speculation on the Six Regular Solids—Discovers the Ellipticity of Mars' Orbit—His Laws of the Planetary Motions—His Ideas of Gravitation—His Religious Character—Galileo, born 1564, died 1642—The first to apply a Telescope to the Heavens—Discovers the Four Satellites and Belts of Jupiter—His Researches in Mechanics—Is summoned before the Inquisition for Heresy—Retracts his Opinions, but persists in teaching the Doctrine of the Earth's Motion—Is again summoned before the Inquisition—His Sentence to Imprisonment for Life—Becomes Blind—His Scientific Character—Labours of Bouilland, and of Borelli—Suggestions of Dr. Hooke on Gravity—His Circular Pendulum—His Experiments with it—His Views respecting the Cause of the Planetary Motions, 250-288

## CHAPTER XII.

The first Idea of Gravity occurs to Newton in 1655—His first Speculations upon it—He abandons the Subject from having employed an erroneous measure of the Earth's Radius—He resumes the Subject in consequence of a discussion with Dr. Hooke, but lays it aside, being occupied with his Optical Experiments—By adopting Picard's Measure of the Earth, he discovers the Law of Gravity, and the Cause of the Planetary Motions—Dr. Halley goes to Cambridge, and urges him to publish his Treatise on Motion—The Germ of the Principia, which was composed in 1685 and 1686—Correspondence with Flamsteed—Manuscript of Principia sent to the Royal Society—Halley undertakes to publish it at his own expense—Dispute with Hooke, who claims the discovery of the Law of Gravity—The Principia published in 1687—The new edition of it by Cotes begun in 1700, and published in 1713—Character and Contents of the Work—General Account of the Discoveries it contains—They meet with opposition from the followers of Descartes—Their reception in foreign countries—Progress of the Newtonian Philosophy in England and Scotland, 289-343

## CHAPTER XIII.

The Newtonian Philosophy stationary for half a century, owing to the imperfect state of Mechanics, Optics, and Analysis—Developed and extended by the French Mathematicians—Influence of the Academy of Sciences—Improvements in the Infinitesimal Calculus—Christian Mayer on the Arithmetic of Sines—D'Alembert's Calculus of Partial Differences—Lagrange's Calculus of Variations—The Problem of Three Bodies—Importance of the Lunar Theory—Lunar Tables of Clairaut, D'Alembert, and Euler—the Superior Tables of Tobias Mayer gain the Prize offered by the English Board of Longitude—Euler receives part of the English Reward, and also a Reward from the French Board—Laplace discovers the cause of the Moon's Acceleration, and completes the Lunar Theory—Lagrange's Solution of the Problem of Three Bodies as applied to the

Planets—Inequalities of Jupiter and Saturn explained by Laplace—Stability of the Solar System the Proof of Design—Maclaurin, Laplace, and others, on the Figure of the Earth—Researches of Laplace on the Tides, and the Stable Equilibrium of the Ocean—Theoretical Discovery of Neptune by Adams and Leverrier—New Satellites of Saturn and Neptune—Extension of Saturn's Ring and its Partial Fluidity—Twenty-seven Asteroids discovered—Leverrier's theory of them—Comets with Elliptic Orbits within our System—Law of Gravity applied to Double Stars—Spiral Nebulae—Motion of the Solar System in Space,	PAGE 344-391
---	-----------------

## APPENDIX TO VOLUME I.

No. I.—Letter from Mr. Newton to Francis Aston, Esq., a young Friend who was on the eve of setting out upon his Travels,	385-389
II.—An Hypothesis explaining the Properties of Light discoursed of in my several Papers,	390-419
III.—Drawing and Measures of the Eye of a Sheep,	420-422
IV.—Letter from Newton to Dr. Wm. Briggs,	423-428
V.—Second Letter of Newton to Dr. Briggs,	429-430
VI.—Newton's Fifteenth Query,	431
VII.—Description of the Optic Nerves and their Juncture in the Brain, by Sir Isaac Newton,	432-436
VIII.—Correspondence between Halley and Newton,	437-456
IX.—Halley's Verses prefixed to the Principia,	457-459
X.—Brief Notice of Professor Cotes,	460-462
XI.—Newton's Directions to Dr. Bentley for Studying the Principia, and John Craig's list of Authors to be read before Studying the Principia,	463-471
XII.—Continuation of Appendix, No. VIII,	472-473

## LIST OF ENGRAVINGS AND WOODCUTS.

## VOL. I.

Portrait of Sir Isaac Newton,	Frontispiece
The House at Woolsthorpe, the Birthplace of Newton,	5
Sir Isaac Newton's Reflecting Telescope,	46
Front View of Lord Rosse's Telescope,	63
Back View of do. do.,	64

## VOL. II.

Rousselliac's Statue of Newton in Trinity College,	Frontispiece
The Rooms of Sir Isaac Newton in Trinity College,	87
The House of Sir Isaac Newton in Martin Street,	253
Engraving from a Cast of Sir Isaac Newton's Face, taken after Death,	415
Engraving of a Box belonging to Sir George Hamilton Seymour, G.C.B., which was presented by Sir Isaac Newton to the Earl of Abercorn,	418
