

MATHEMATICAL AND PHYSICAL PAPERS

BY

SIR JOSEPH LARMOR, Sc.D., F.R.S.

HON. F.R.S. EDIN.; HON. MEM. R. IRISH ACAD.; HON. MEM. ASIATIC
SOC. OF BENGAL, MANCHESTER LIT. AND PHIL. SOC.; HON. FOR. MEM.
U.S. NATIONAL ACAD. OF SCIENCES, AMERICAN ACAD. OF SCIENCE
AND ARTS, BOSTON, AMERICAN PHILOSOPHICAL SOCIETY, PHILA-
DELPHIA, WASHINGTON ACAD., R. ACCADEMIA DEI LINCEI, ROME,
ISTITUTO DI BOLOGNA; CORRESPONDANT OF THE INSTITUTE OF
FRANCE; LUCASIAN PROFESSOR IN THE UNIVERSITY OF CAMBRIDGE,
AND FELLOW OF ST JOHN'S COLLEGE

VOLUME II

CAMBRIDGE
AT THE UNIVERSITY PRESS

1929

CONTENTS

ART.	PAGE
48. On the Period of the Earth's Free Eulerian Precession . . .	I
[<i>Proc. Camb. Phil. Soc.</i> Vol. ix (1896) pp. 183-193.]	
49. A Dynamical Theory of the Electric and Luminiferous Medium.—Part III: Relations with Material Media . . .	II
[<i>Phil. Trans. Roy. Soc.</i> (1897).]	
Appendix (1927). Applications of the Virial . . .	132
" " The Essential Nature of the Maxwell Stress . . .	135
50. The Influence of a Magnetic Field on Radiation Frequency . . .	138
[<i>Proc. Roy. Soc.</i> Vol. LX (1897) p. 514.]	
51. On the Theory of the Magnetic Influence on Spectra: and on the Radiation from Moving Ions . . .	140
[<i>Philosophical Magazine</i> , Dec. 1897.]	
52. Note on the Complete Scheme of Electrodynamical Equations of a Moving Material Medium: and on Electrostriction . . .	150
[<i>Proc. Roy. Soc.</i> Vol. LXIII (1898) pp. 365-372.]	
53. On the Dynamics of a System of Electrons or Ions: and on the Influence of a Magnetic Field on Optical Phenomena . . .	158
[<i>Trans. Camb. Phil. Soc.</i> Vol. XVIII (1900) pp. 380-407.]	
54. The Methods of Mathematical Physics . . .	192
[Address to the Mathematical and Physical Section of the British Association: Bradford, 1900.]	
55. On the Relations of Radiation to Temperature . . .	217
[Report of the British Association: Bradford, 1900.]	
56. On the Statistical Dynamics of Gas Theory as illustrated by Meteor Swarms and Optical Rays . . .	222
[Report of the British Association: Bradford, 1900.]	
57. Can Convection through the Aether be detected Electrically? . . .	225
[From <i>The Scientific Writings of the late G. F. FitzGerald</i> (1902) pp. 566-569.]	
58. On the Electrodynamical and Thermal Relations of Energy of Magnetization . . .	229
[<i>Proc. Roy. Soc.</i> Vol. LXXI (1903) pp. 229-239.]	
59. On the Mathematical Expression of the Principle of Huygens . . .	240
[<i>Proc. London Math. Soc.</i> Ser. 2, Vol. 1 (1903) pp. 1-13.]	
60. On the Mathematical Expression of the Principle of Huygens.—Part II . . .	255
[<i>Proc. London Math. Soc.</i> Ser. 2, Vol. XIX (1919) pp. 169-180.]	
61. On the Intensity of the Natural Radiation from Moving Bodies and its Mechanical Reaction . . .	266
[From the <i>Boltzmann Festschrift</i> , Sept. 1903.]	
62. On the Ascertained Absence of Effects of Motion through the Aether, in Relation to the Constitution of Matter, and on the FitzGerald-Lorentz Hypothesis . . .	274
[<i>Proc. Phys. Soc. of London</i> , Vol. XIX; also <i>Phil. Mag.</i> June 1904.]	

ART.	PAGE	ART.
63. Josiah Willard Gibbs. (1839-1903)	281	78.
[Obituary notice: from <i>Proc. Roy. Soc.</i> 1904, pp. 1-17.]		
64. On the Dynamical Significance of Kundt's Law of Selective Dispersion, in Connection with the Transmission of the Energy of Trains of Dispersive Waves	299	79.
[<i>Proc. Camb. Phil. Soc.</i> Vol. XIII (1904) pp. 21-24.]		
65. Note on the Mechanics of the Ascent of Sap in Trees	393	80.
[<i>Proc. Roy. Soc. B.</i> Vol. LXXVI (1905) pp. 460-463.]		
66. On the Constitution of Natural Radiation	306	81.
[<i>Philosophical Magazine</i> , Nov. 1905.]		
67. The Irregular Movement of the Earth's Axis of Rotation: A Contribution towards the Analysis of its Causes	316	82.
[With Major E. H. Hills. <i>Monthly Notices of the Roy. Astron. Soc.</i> Vol. LXXVII, pp. 22-34, Nov. 1906.]		
68. The Irregular Movement of the Earth's Axis of Rotation: A Contribution towards the Analysis of its Causes. Part II	332	
[With Col. E. H. Hills. <i>Monthly Notices of the Roy. Astron. Soc.</i> Vol. LXXV, pp. 518-521, May 1915.]		
69. On the Range of Freedom of Electrons in Metals	336	
[<i>Philosophical Magazine</i> , August 1907.]		
70. Note on Pressure Displacement of Spectral Lines	341	83.
[<i>Astrophysical Journal</i> , Vol. XXVI (1907) pp. 120-122.]		
71. The Physical Aspect of the Atomic Theory	344	
[<i>The Wilde Lecture: Memoirs of the Manchester Lit. and Phil. Soc.</i> Vol. LII, 1908, No. 10.]		
Appendix (1908). On the Possible Types of Direct Chemical Combination	373	84.
72. The Relation of the Earth's Free Precessional Nutation to its Resistance against Tidal Deformation	380	85.
[<i>Proc. Roy. Soc. A</i> , Vol. LXXXII, Dec. 18, 1908, pp. 89-96.]		
73. The Kinetic Image of a Convected Electric System formed in a Conducting Plane Sheet	388	86.
[<i>Proc. London Math. Soc.</i> Ser. 2, Vol. VIII (1909) pp. 1-9.]		
74. The Statistical and Thermodynamical Relations of Radiant Energy	396	87.
[Bakerian Lecture. <i>Proc. Roy. Soc. A</i> , Vol. LXXXIII (1909) pp. 82-95.]		
(1928) Note on Anthropomorphism and its Quantification	411	88.
75. On the Statistical Theory of Radiation	413	
[<i>Philosophical Magazine</i> , Aug. 1910.]		
76. William Thomson (Lord Kelvin): <i>Mathematical and Physical Papers</i> , Vol. IV, Hydrodynamics and General Dynamics	416	89.
[<i>Scientia</i> , Vol. VIII (1910).]		
77. On the Dynamics of Radiation	420	90.
[<i>Lecture at the International Congress of Mathematicians: Cambridge, August 1912: from Report</i> , Vol. II, pp. 1-20.]		
Appendix. Retardation by Radiation Pressure: A Correction	446	
[Postscript added in <i>Poynting's Scientific Papers</i> (1920) pp. 754-757.]		

Contents

ART.		
78.	The Electromagnetic Force on a Moving Charge in Relation to the Energy of the Field [<i>Proc. London Math. Soc. Ser. 2</i> , Vol. XIII (1913) pp. 50-56.]	450
79.	Protection from Lightning and the Range of Protection afforded by Lightning Rods [With J. S. B. Larmor, <i>Proc. Roy. Soc. A</i> , Vol. XC (1914) pp. 312-318.]	457
80.	The Reflexion of Electromagnetic Waves by a Moving Perfect Reflector, and their Mechanical Reaction [<i>Philosophical Magazine</i> , Vol. XXVIII, Nov. 1914, pp. 702-707.]	464
81.	Irregularities in the Earth's Rotation, in Relation to the Outstanding Discrepancies in the Orbital Motion of the Moon [<i>Monthly Notices of the Roy. Astron. Soc.</i> Vol. LXXV, Jan. 1915, pp. 211-219.]	468
	Postscript (1928). The Standard of Newtonian Astronomical Time	478
82.	The Influence of Local Atmospheric Cooling on Astronomical Refraction [<i>Monthly Notices of the Roy. Astron. Soc.</i> Vol. LXXV, Jan. 1915, pp. 205-210.]	482
83.	The Influence of the Oceanic Waters on the Law of Variation of Latitudes [<i>Proc. London Math. Soc. Ser. 2</i> , Vol. XIV (1915) pp. 449-449.]	489
	Postscript (1927). Tidal Turbulence	498
84.	Viscosity in Relation to the Earth's Free Precession [<i>Monthly Notices of the Roy. Astron. Soc.</i> Vol. LXXVI (1915).]	500
85.	Note on the Solution of Hill's Equation [<i>Monthly Notices of the Roy. Astron. Soc.</i> Vol. LXXV (1915).]	502
	Postscript (1928). Physical Analysis of its Structure	503
86.	The Transition from Vapour to Liquid when the Range of the Molecular Attraction is Sensible [<i>Proc. London Math. Soc. Ser. 2</i> , Vol. XV (1916) pp. 182-191.]	504
87.	Mutual Repulsion of Spectral Lines and other Solar Effects concerned with Anomalous Dispersion [<i>Astrophysical Journal</i> , Vol. XLIV (1916) pp. 265-272.]	514
88.	Periodic Disturbance of Level arising from the Load of Neighbouring Oceanic Tides [<i>Proc. Roy. Soc. A</i> , Vol. XCIV (1916): abstract of memoir by K. Terazawa, published in <i>Phil. Trans.</i>]	520
89.	Presidential Address to the London Mathematical Society [<i>Proc. London Math. Soc. Ser. 2</i> , Vol. XVI, pp. 1-7 and 8-42 (Nov. 2nd, 1916).]	522
90.	The Fourier Harmonic Analysis: its Practical Scope, with Optical Illustration [Continuation of previous Address: read November 2nd, 1916.]	529
	Additions (1928). Relation to Wave Mechanics	565

ART.	PAGE
91. On Permanent Periodicity in Sunspots	568
[With N. Yamaga. <i>Proc. Roy. Soc. A</i> , Vol. xciii, pp. 493-506, 1917.]	
(1928) The Test of a Homogeneous Record	584
92. John Michell: His Contributions to Astronomical Science	586
[From a Memoir of John Michell, of Queens' College, Cambridge (Fellow 1749), by Sir Archibald Geikie. Camb. Univ. Press, 1918, pp. 96-105.]	
93. On the Nature of Heat, as Directly Deducible from the Postulate of Carnot	590
[<i>Proc. Roy. Soc. A</i> , Vol. xciv, Feb. 1, 1918, pp. 326-339; also in <i>Revue générale des Sciences</i> , May 1918.]	
(1928). On Abstract Entropy and Temperature	603
94. The Principle of Molecular Scattering of Radiation	608
[<i>Philosophical Magazine</i> , Vol. xxxvii, pp. 161-163; Jan. 1919.]	
95. How could a Rotating Body such as the Sun become a Magnet?	611
[From <i>Report of the British Association</i> , Bournemouth, 1919.]	
Appendix (1927).—On the Solar Magnetic Fields	613
96. The Pressure of Waves of Sound	617
[From <i>Comptes rendus du Congrès International des Mathématiciens</i> , Strasbourg, 1920.]	
97. On Electro-crystalline Properties as conditioned by Atomic Lattices	620
[<i>Proc. Roy. Soc. A</i> , Vol. xcix, pp. 1-10; Jan. 1921.]	
98. (i) Escapements and Quanta: (ii) On Non-Radiating Atoms	630
[<i>Philosophical Magazine</i> , Vol. xlii, 1921; communicated to the British Association, Edinburgh, Sept. 1921.]	
99. The Stellate Appendages of Telescopic and Entoptic Diffraction	634
[<i>Proc. Camb. Phil. Soc.</i> Vol. xxi, Pt. iv, pp. 410-413; Dec. 1, 1921.]	
100. Why Wireless Electric Rays can bend round the Earth	639
[<i>Philosophical Magazine</i> , Vol. xlviii, pp. 1025-1036, Dec. 1924. Read at the Cambridge Philosophical Society, Oct. 27: abstract in <i>Proceedings</i> .]	
Appendix (1928).—Atmospheric Transmission in the Earth's Magnetic Field	650
[From <i>Proc. Calcutta Math. Soc.</i> , Jubilee volume, 1928.]	
101. On the Cones of Steady Compression for a Flying Bullet	657
[Communicated to the International Congress of Mathematicians at Toronto, August 1924.]	
102. Insular Gravity, Oceanic Isostasy, and Geological Tectonic	662
[<i>Proc. Camb. Phil. Soc.</i> Vol. xxiii, pp. 130-135; Feb. 8, 1926.]	
Oceanic Isostasy in Relation to Geological Tectonic	668
[<i>Nature</i> , Sept. 11, 1926.]	
103. The Law of Inertia for Radiating Masses	672
[From <i>Nature</i> , Feb. 27, 1926.]

104. What determines the Resistance and the Tilt of an Aeroplane? 675
[*Proc. Camb. Phil. Soc.* Vol. xxiii, Pt. vi, pp. 617-630:
Feb. 1, 1927.]

Postscript (April, 1928). On Limitations of Models for Flow of
Viscous Fluid 691

Postscript (August, 1928). On the Kelvin Theory of the
Impulse 693

Appendix I. Abstracts: From Reports of the British Association.

- Molecular Distances in Galvanic Polarization. [Aberdeen,
1885.] 695
- On the Physical Character of Caustic Surfaces. [Leeds, 1890.] 696
- The Action of Electrical Radiators, with a Mechanical
Analogy. [Cardiff, 1891.] 696
- On a Familiar Formation of Plane Caustic Curves. [Notting-
ham, 1893.] 697
- The Influence of Pressure on Spectral Lines. [Toronto, 1897.] 698
- On the Application of the Method of Entropy to Radiant
Energy. [Belfast, 1902.] 699
- On the Relation of Voltaic Potential Differences to Tem-
perature. [Belfast, 1902.] 699
- On the Dynamical Significance of Kundt's Law of Anomalous
Dispersion. [Cambridge, 1904.] 700
- On the Relation of the Röntgen Radiation to Ordinary Light.
[Cambridge, 1904.] 700
- On the Range of Freedom of Electrons in Metals. [Leicester,
1907.] 701
- From "A discussion on Radiation," with contributions by
Jeans, Lorentz, Love and others. [Birmingham, 1913.] . 701
- On Lightning and Protection from it. [Birmingham, 1913.] . 703
- The Limitations of Relativity. [Bournemouth, 1919.] . . 704
- A Kinematic Representation of Jacobi's Theory of the Last
Multiplier. [Toronto, 1897.] 704

Appendix II. On Generalized Formal Thermodynamics.

- (i) Professor J. Clerk Maxwell (1876) On Gibbs' Thermodynamic
Formulation for Coexistent Phases 705
[From South Kensington Conferences (1876): reprinted in
Philosophical Magazine, Nov. 1908, pp. 818-824.]
- (ii) Historical Note (1927): Andrews, Maxwell, Willard Gibbs . 710
- (iii) Professor J. Clerk Maxwell (1876) On the Equilibrium of
Heterogeneous Substances 713
[From *Proc. Camb. Phil. Soc.* Vol. 11, March 8, 1876.]
- (iv: 1928) The Types of Characteristic Equation determining a
Thermodynamic System 715

	PAGE
Appendix III (1927). Thermodynamic Cycles in Relation to Statistics.	
(i) Formal Synthesis of Available Energy and Entropy . . .	724
(ii) On the Statistical Method in Thermodynamics: with Illustrations from Magnetism . . .	728
(iii) The Magnetic Carnot Cycle Scrutinized in Detail . . .	735
(iv) The Carnot Pressure-Cycle developed for an Imperfect Gas .	738
(v) Molecular Statistics and Temperatures for Mixed Fluid Substances in Rapid Flow . . .	741
(vi) On the Maxwellian General Doctrine of Statistical Dynamics	743
Appendix IV. The Doctrine of Molecular Scattering of Radiation	749
Appendix V. Faraday as Contemporary with Ampère: Motors, Dynamos, Stresses, and Thresholds . . .	762
Appendix VI. The Time and Space of Astronomical Observers .	768
Appendix VII. Mind, Nature and Atomism . . .	775
Appendix VIII. Synoptic View of a Physical Universe as Optically Apprehended . . .	785
INDEX TO VOLUME I . . .	813
INDEX TO VOLUME II . . .	819
Addenda and Corrigenda . . .	xxi-xxxii

PAPERS RELATING TO PHYSICAL RELATIVITY

NOT HERE REPRINTED (See p. vii.)

On the Essence of Physical Relativity.

[*Proc. U.S. National Academy of Sciences*, Vol. iv, Nov. 1918, pp. 334-337.]

On generalized Relativity in connexion with Mr W. J. Johnston's Calculus.

[*Proc. Roy. Soc.* Vol. xcvi A, Aug. 1919, pp. 334-363.]

The Relativity of the Forces of Nature.

[*Monthly Notices of the R. Astron. Soc.* Vol. LXXX, Dec. 1919, pp. 109-138.]

Gravitation and Light.

[*Proc. Camb. Phil. Soc.* Vol. xix, Jan. 1920, pp. 324-344.]

Questions in Physical Inter-Determination.

[Lecture to International Congress of Mathematicians, Strasbourg, Sept. 1920, *Comptes rendus du Congrès*, pp. 3-40.]

On the nature and amount of the Gravitational Deflection of Light.

[*Philosophical Magazine*, Vol. xlv, Jan. 1923, pp. 243-256.]

Can Gravitation really be absorbed into the Frame of Space and Time?

[*Nature*, Feb. 10, 1923, p. 200.]

Newtonian Time essential to Astronomy.

[Supplement to *Nature*, April 9, 1927, pp. 1-12.]

The Grasp of Mind on Nature.

[James Scott Lecture, *Proc. Roy. Soc. Edin.* Vol. XLVII, Aug. 1927, pp. 307-325.]
