GRAPHITE ADD 1"

Choosing the proper Flex:

Shaft flex, a measurement of how much a shaft will bend under a certain load, is directly related to trajectory, distance and feel. The proper shaft flex for your swing speed helps produce the optimal trajectory for your shots.

Flex Chart: Use the Charts below to determine the proper flex. The charts below are for consistent carry yardages only (don't include roll).

Club Used from 150 Yards	Recommended Flex
4 or 5 iron	Ladies Flex
5 iron	Senior Flex
6 iron	Soft Regular Flex
7 iron	Regular Flex
7 or 8 iron	Firm Flex
8 iron	Stiff Flex
9 iron	Extra-Stiff Flex

Distance Hit with a Driver (Carry Distance Only)	Recommended Flex
Less than 180 Yards	Ladies Flex
From 181-200 Yards	Senior Flex
From 200-235 Yards	Regular Flex
From 236-275 Yards	Stiff Flex
Greater than 275 Yards	Extra-Stiff Flex

Choosing the proper grip size:

Grip size plays a significant role in the shape of every golfer's shot. Use the chart below to determine the proper grip size for the clubs. Too large a grip can limit the golfer's ability to properly release the wrists through the impact area (resulting in a block and/or fade), while too small a grip can cause an early release (resulting in a pull and/or draw).

Golf Glove Size	Grip Size
Cadet Extra Large	Oversize
Extra Large	Oversize
Cadet Large	Mid Size
Large	Mid Size
Cadet Medium Large	Standard
Medium large	Standard
Cadet Medium	Standard
Medium	Standard
Cadet Small	Lady Standard
Small	Lady Standard
