Aluminum Rental Deck

Kargo King continues to innovate with the development of brand new rental deck constructed out of an aluminum material.

Manufactured with high quality aluminum, the aluminum rental deck is designed to maintain all the durability and efficiency found in our conventional steel offering.

Our research and development of this Aluminum deck provides 1,490 lbs. of payload in weight saving when compared to our equivalent steel deck (16' Rental Deck). The added benefits is in the weight savings through an increased payload capacity positively impacting day to day operations of a truck fleet.

In the North America, a commercial driver's license (CDL) is required to operate a truck with a gross weight vehicle rating (GVWR) greater than 26,000 lbs. The Kargo King cSix system coupled with an aluminum rental deck, will get you well under 26,000 lbs while providing adequate payload to transport rental equipment. A commercial driver's license (CDL) is no longer required at 26,000 lbs. Thus, drivers/operators are much easier to find and less expensive to retain. Furthermore the selection of trucks expands with potential Class 7 truck chassis (33,000 lbs. GVWR) can be re-rated/de-rated to be under 26,001 lbs.

Aluminum 16' Deck

Outside Length of Body	200"
Inside Length of Body	168" + Beaver Tail
Outside Width of Body	100 3/4", includes Rub Rails on each side
Understructure	Aluminum Extrusions
Headboard Height Options	48" Kargo King Style
Headboard Material	3/16" Aluminum 5052 H32
Floor Material	1/4" Aluminum Checker Plate 3003 H22
Tie Downs	2 in Centre, 5 on each side + Stake Pockets
Weight Range	1,600 lbs

BODY LENGTHS (IN DEVELOPMENT)

12' (11')

14' (12.5')

16' (14')
