SOLUTION TO
RESTORE YOUR
NATURAL BEAUTY

WHAT CAN YOU TREAT WITH PDO THREADS?

Cheeks

Brow

Fox Eye

Lips

Jowls

Nose

Neck

BODY

Hand
Décolletage
Breast
Tummy
Inner & Outer Thigh
Knee
Buttock
Batwing (underarm)

WHAT ARE PDO THREADS?

Polydioxanone is a fully absorbable suture that has been used for more than 20 years in orthopedics, surgery, plastic surgery and ophthalmology.

PDO Threads have a high safety profile, complete absorption and minimal tissue reaction. PDO threads can reposition sagging skin while also stimulating collagen and elastin production.

The PDO Thread is inserted into the subdermal tissue for temporary support of the area being treated. Over the next 6 months, the PDO threads dissolve creating collagen, elastic and hyaluronic acid. The skin becomes thicker, tighter and smoother; giving a more youthful look.

Barbed threads are used to reposition, lift and secure static, sagging skin. Smooth threads repair and tighten wrinkled, crepey skin by replacing and adding collagen and elastin to damaged areas, resulting in a smoother, plumper appearance.

Even when the threads fully dissolve, the skin will still stay tight in its lifted position for as long as another 12 months because of the new collagen and elastin fibers that were formed. Each treatment is tailored to your exact needs.
