

Digital value chains, AI, automation, machine learning and big data have become an integral part of processes for both private and public sectors.

Wider ethical considerations about the application of digital technologies and impact (positive or negative) on society is central for informing corporate and government digital policies.

In this regard, civil society, civic engagement and public discourse are necessary towards the invention of a platform ecosystem that prioritizes citizen's values.

In FOW we argue that a meaningful engagement results in digital fluency (aka media, information, news and data literacies).
