

## NOTICE TO RATEPAYERS — DUST CONTROL

Dust season is here, and we want to make sure you have everything you need to keep your road comfortable this summer — including a new option we're genuinely excited to tell you about.

**Give us a heads up before you apply.**

Whether you're going with calcium chloride or the recycled shingle product (more on that below), please contact the RM office at least 3–5 business days before your planned application. That gives our Foreman time to schedule any blading or gravelling that should happen first. It's a small step that makes a real difference in how well the product performs — and how long it lasts. Without that window, there's a chance routine road maintenance could disturb a fresh application, and nobody wants that.

### Your dust control options:

***Calcium Chloride*** — the tried-and-true option. Draws moisture from the air to keep the road surface damp and settled. Works well in our climate and is widely available.

***Recycled Asphalt Shingles (Ground Shingle Aggregate)*** — a newer option we've been keeping an eye on. Old asphalt shingles are ground into a fine aggregate that can be applied for dust control on gravel roads and yards. It's a local, sustainable product — and we recently tried a test strip right here in the RM. We're very impressed with the results so far. The surface settled in nicely, and we're looking forward to seeing how it holds up through the season.

For more information on sourcing recycled shingle aggregate, visit [greenviewrecycling.com](http://greenviewrecycling.com) or call 306-530-8114.

### A few things to keep in mind:

- Dust suppressant is the responsibility of the property owner — the RM does not supply or fund dust control products.
- All applications on municipal roads must be coordinated through the RM office in advance, as required under Bylaw #2021.07.
- These provisions apply to all-weather roads. If you're unsure about your road classification, just ask — we're happy to help.
