Bio Spore Restore IG contains a spore based probiotic together with serum derived immunoglobulins, which have been shown to be able to bind to certain microbes and pathogens to help move them through the gut.*

Immunoglobulin G may also be helpful with binding to pathogens and dead bacteria that could be releasing lipopolysaccharides, which may be endotoxic if they enter circulation. This is important to help with lowering LPS, which can be helpful with leaky gut.*

Then, we have included spore-forming bacillus species: coagulans, clausii, and subtilis. These spore-forming bacteria are ones that tend to secrete antimicrobial compounds and have also been researched to be able to reduce LPS response after food; meaning, it is helping to improve gut function as well as reduce intestinal hyperpermeability.*

These specific species are well tolerated by people with sensitive guts and people with small intestinal bacterial overgrowth.*

All together, the high concentrations of immunoglobulins and growth factors, along with these spore forming probiotics, are clinically proven to support immune health, digestive wellness, and sports recovery.*
