The Inflam Assist formulation combines turmeric with boswellia, along with a sophora root extract, that creates a synergistic effect to help reduce inflammation from many different angles.

This is an important step in the healing journey because a chronic Inflammatory state has been connected to metabolic disease, obesity, autoimmune disease, and even conditions like depression and anxiety.

Turmeric is very popular in products to help with inflammation. We have chosen an ingredient that is 95% curcuminoids, which is the preferred concentration of the most impactful ingredient from turmeric.

Boswellia is very strong as an antioxidant and although most companies don't utilize it, it is very helpful in the reduction of the inflammatory burden. It has been shown to be very effective at reducing inflammation in the GI tract.

Lastly, sophora root extract has also been added to this product as a special ingredient. At 20 % matrine, sophora is a root that has also been shown to help with inflammatory reduction systemically, and it can also assist with a major contributor of inflammation that is rarely addressed.

This is accomplished with the reduction of certain chronic viral infections, which can have an important impact on lowering the inflammatory burden.
