Omega Advanced is a unique fish oil alternative with omega-3 fatty acid lysine salt. It maintains the bioactive form of EPA and DHA without the issues of oxidation, contamination, or rancidity found in fish oil. It's more shelf-stable, doesn't taste fishy, and comes in smaller capsules.

In fact, there have been studies that have looked at bioavailability of free fatty acid form and have found that it leads to up to five times the blood levels of EPA and DHA as compared to the same dose of fish oil.

That means we can multiply the EPA and DHA amounts of omega advanced by five when comparing to the amounts necessary of a standard fish oil. This way we can get a therapeutic dose in a smaller serving size, which means a smaller pill size to swallow.
