

# Planetary Life Raft Proposal

It is incumbent on global leadership, and the public at large, to consider planning for Global catastrophe in the face of newly disclosed public information on Plasma Cosmology.

This information suggests that while nations have collected many devices to deal with and cause manmade disasters, we have not done much to address the real threat we all face, Solar Plasma 'Weather' bursts.

I would like to propose that scientific and political thinktanks turn toward addressing this threat to humanity. It is not likely that the whole of mankind will well survive such potential challenge without global cooperation remaining 'on the table'.
