

# Solar Taurus 70 Gas Turbines – 8.1 MW Each – Brand New (2017)

Available are **two (2) brand new Solar Taurus 70 gas turbines**, each rated at **8.1 MW**. Manufactured in **2017**, these units have **zero total firing hours** and are equipped with **SoLoNOx combustion technology**, providing ultra-low NOx emissions. Ideal for clean, efficient power in industrial or oil & gas applications.

# Technical Specifications

Model	Solar Taurus 70
Quantity	2 Units
Power Output	8.1 MW (each)
Fuel Type	Natural Gas (NG)
Combustion System	SoLoNOx (Low NOx Emissions)
Year of Manufacture	2017
Condition	New

# Performance Advantages

## Zero Environmental Impact

The SoLoNOx combustion system delivers industry-leading emissions performance, making these turbines ideal for environmentally sensitive applications and locations with strict regulatory requirements.

These turbines represent an exceptional opportunity for process facilities, energy service providers, and industrial operations seeking high-performance, environmentally responsible power generation solutions with minimal commissioning requirements.

## Operational Excellence

- Factory-new, zero-hour units with full warranty
- Proven Solar® design architecture with exceptional reliability
- Optimized for remote or modular power solutions
- Ideal for distributed generation systems

# Procurement Information

## Immediate Availability

Both units are ready for immediate purchase and deployment, offering a significant advantage over typical 12-18 month lead times for new turbine orders.

## Complete Documentation

Full manufacturer documentation, specifications, and certification papers available upon request for technical evaluation.
