About Us

PlexiPods are an industry-first, pop-up visitation environment that provide a means for patients and their loved ones to spend time together, without worrying about spreading illness or compromising those who are already ill. Designed with wellness and comfort in mind, every surface in a PlexiPod unit is either antimicrobial or a snap to sanitize, all while maintaining a cozy living room atmosphere.

Created by AE Design Group in collaboration with Design Source Group, PlexiPods are backed by a decade of experience in healthcare facility design and procurement.

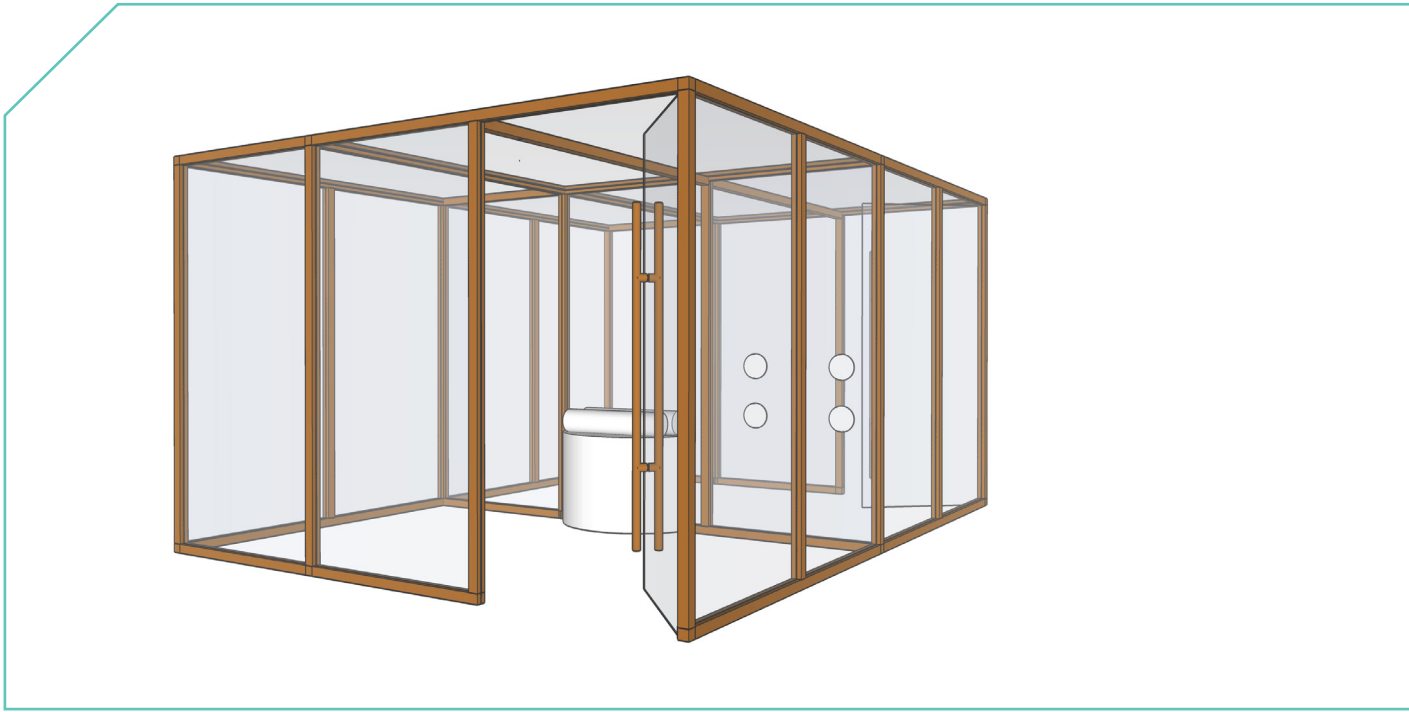

Avigail Eisenstadt is a graduate of the New York School of Interior Design and the founder of AE Design Group. She founded her firm in 2010, after working as an in-house designer for a New York based operator of high-end assisted living and skilled nursing facilities. Over the last decade, Avigail has grown her business to include Design Source Group, a procurement & purchasing firm, and built an unparalleled reputation for skillful design and discerning accommodations in the healthcare, commercial, corporate, hospitality, and multi-family sectors.

What Are PlexiPods?

PlexiPods are easy-to-assemble, modular visitation rooms that allow patients or residents to connect with family and friends without the risk of spreading germs.

They're made of two main components – the plexiglass walls and a channel system that connects them and provides mounting for lighting throughout the pods during the visit and a sanitizing light in between.

Each pod is separated down the center by a **plexiglass divider**, with space for seating on both sides and a sleek intercom system for effortless communication.

Every aspect of Plexipods is designed with safety and cleanliness in mind.

PlexiPods are cozy, comfortable, and make visits stress-free via a range of optional integrated features:

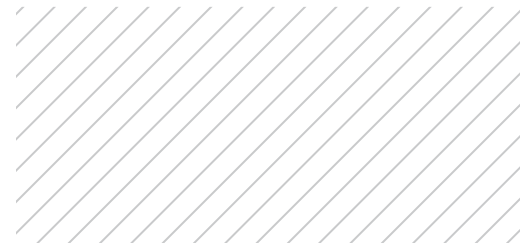

- Antimicrobial Copper Fittings & Furniture Details
- Integrated Antimicrobial Misting System
- Disinfecting UV Light
- Bacteriostatic Krion Coffee Table
- Air-Purifying Plants
- Easy-To-Clean Plexiglass Walls
- Sleek intercommunication system
- Hug stations
- Comfortable seating
- Cozy living room feel
- Smartglass walls that transition between transparent and opaque to allow privacy

**PlexiPods are the only
healthcare visitation solution
currently on the market and
have been designed and
developed by experts in
healthcare facility design.**

Because of its modular nature, the Plexipod system is scalable, meaning it can be ordered as a single pod for small-scale facilities or as a multi-pod room for larger facilities and commercial use.

At 7'3" tall, PlexiPods are building- and fire-code compliant, and can fit in even the lowest ceilings allowed by healthcare building codes.

How Does It Work?

1.

Call or email us to begin your order

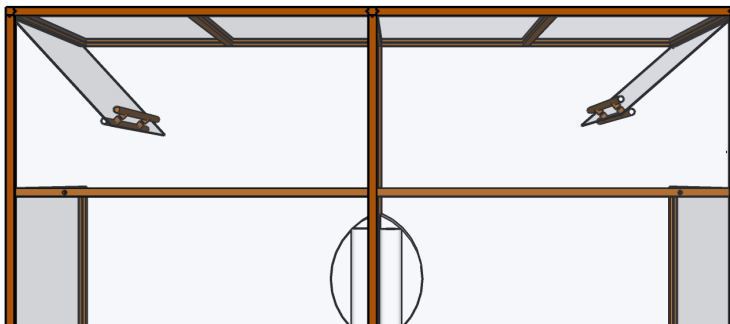

We'll need the length, width, ceiling height, and a picture of the room you'd like to have your PlexiPod system built in.

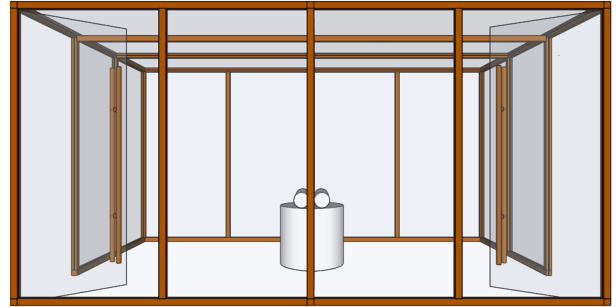

2.

We'll send you a digital rendering of what the PlexiPod system will look like in the room

At this step, you can select which features & add-ons you'd like.

08

3.

You get a quote for the PlexiPod system and the selected features

After you approve the quote, we'll create all of the components and ship your custom PlexiPod system within.....

4.

Your PlexiPod is shipped out and ready to assemble

The assembly process is simple and straightforward enough for your local handyman – the pod assembles to itself, there's no cutting, permanent anchoring, or electrical work required.

Contact

The brief time we have with our loved ones is precious – give the people in your care the opportunity to visit with theirs in a meaningful and memorable way.

Call or email us to start designing your custom PlexiPod system today. Bespoke options available.
