

Mimecast Security Bundles Solution Brief

Why Mimecast Security from RapidScale?

Complement your Microsoft 365 solution with best-in-class security services from Mimecast. Add the benefit of having one single provider managing your email, collaboration and security, backed with RapidResponse Support. With a Net Promoter Score exceeding 75, our 24/7 US-based end-user support puts us among the leaders in the industry.

Levels for Every Need

RapidScale's Mimecast solutions are packaged to give you pre-built tiers of service, with additional features at every level, so you can customize your implementation to meet your unique needs – instead of being stuck with cookie-cutter offerings that don't cover you in the ways you need it to.

Choose from levels that offer basic security, threat remediation, continuity, and email archiving, and then layer in additional options like secure messaging, the ability to send large files, support unique aspects found in healthcare settings, along with long-term retention, advanced oversight capabilities and meeting compliance vetting.

Potent Security Against Attacks and Data Loss

While malware incursions have ebbed slightly in recent years, they remain a high-risk vector: 92% of malware is still delivered through email¹, and overall email compromise efforts doubled between 2016 and 2018². That means organizations must remain vigilant to protect their data and infrastructure.

RapidScale's Mimecast platform offers the one of the most email security solution on the market, built around sophisticated detection engines and a robust set of intelligence sources, to protect against a wealth of today's attack vectors, including phishing, malware and impersonation. It provides peace of mind that your IT team can detect ever-evolving and sophisticated email threats, and ensure they're remediated expeditiously, thereby dramatically reducing your risk posture.

Empower User for Maximum Success

One of the bigger headaches IT teams routinely face with implementation of any solution in a business, is user adoption. The more complex the solution, the higher the challenge of maximizing adoption, resulting in lost revenue as adoption wanes.

Given the risk that low adoption of security solutions means for maximizing your security posture, can you really afford to leave it to chance?

With Mimecast from RapidScale, your business gets a robust vehicle to ensure your users understand the features you deploy and how to use them effectively – through awareness training modules covering basic security concerns and phishing, to HIPAA and how to understand score risk attributes, and even deeper training if needed. This way you can decrease the chance your users will get frustrated learning the powerful features of this platform, and increase adoption, while decreasing security risks to your organization.
