CASE STUDY: Health Care provider

ABOUT

A privately held health care provider in the continental United States who heavily uses web based applications to support their internal and external clients through a full suite of services.

REQUIREMENTS

The organization required effective integrations and automations to systematically manage services. Resources to connect IT and finance functions across the organizations were fundamentally needed to take IT and finance into the future.

SOLUTION

Warner Telecomm deployed its advanced systems to ingest all relevant data through integration with the client and carrier systems. Data Integrity was applied to validate and interconnect their organic environment of data across business units and divisions. Warner connected to advanced systems through API.

RESULTS

Warner achieved 20% reduction of hard costs and helped the client achieve process automation reductions of over 500 hours per month.

Savings that pay for our services. Guaranteed.

We're so confident that our approach reduces your telecommunications expenses that it comes with a 150% money back guarantee.
