SNYPE

Know more. Explore better.

Turning bird data into knowledge, targets and discovery.

DATA DISCLAIMER

Important limitations on Snype data and guidance

Clear information for app users. Please read this document together with the other Snype legal notices where relevant.

Snype uses data derived from SABAP2, a citizen-science project that maps bird distribution and relative abundance across Southern Africa. While this data is extremely valuable, Snype does not own, control or independently verify every underlying record and cannot guarantee that the data is accurate, complete or up to date. Snype provides birding guidance based on historical records only and does not guarantee that any species will be present, visible or correctly reflected for a specific area or time.

Snype aims to refresh its SABAP2-based dataset monthly, but the app may not always reflect the latest SABAP2 submissions, corrections or updates at the time of use.

Users should treat all results as helpful guidance rather than certainty, and Snype accepts no responsibility for any loss, inconvenience or decisions arising from reliance on the data displayed in the app or any use of the app.

Because Snype's map rankings and heatmaps are based primarily on SABAP2 full-protocol data, some rare birds, vagrants or species not recorded in SABAP2 full-protocol cards may appear in broader Southern African bird lists but not in the Tap the Map or Find any Bird search functions.
