

QxControl™ & Farpointe

QxControl™ is a Unified Video and Access Control platform, natively offering both to provide the most intuitive and complete user experience. To support this approach Qumulex offers products manufactured by Farpointe Data.

These readers and credentials are industry standard and work with any open architecture or industry standard solution, not just Qumulex QxControl. This allows Qumulex customers to streamline their ordering and technical support process. These readers and credentials are also competitively priced and extremely reliable. Partnering with Farpointe Data is another example of the Qumulex mission to provide options and choices to its customers. Available directly from Qumulex.

Specifications

- **Gateways:** Compatible with Qumulex QxLink, QxStation and QxPower gateways.
- **Cameras:** Cameras and encoders supporting ONVIF profile S.
- **Door Controllers:** Axis A1001, Axis A1601.
- Gateways use the Linux Ubuntu LTS 64 Bit operating system.
- QxCots is available for installation on 3rd party hardware.

Part Numbers:

QXCxx-xx: QxControl Cloud subscription for Cameras. "xx " is used to denote cloud storage retention and subscription term. Example, QXC30-12 provides 30 days of cloud storage and is billed annually.

QXD0-xx: Cloud-managed single door subscription.
