PA / PE / EVOH – based 7 layer co-extruded barrier  
vacuum packing, gas flush and MAP pouches

**Film Thickness:**  
80 $\mu$  to 175 $\mu$

Vacuum Pouch offers extensive range of high barrier PA/EVOH-based 7 layer co-extruded barrier vacuum packing, gas flush and MAP. These pouches are available in various sizes, have great strength, high clarity, and provide additional protection against oxygen & moisture. These pouches will provide extended shelf-life and protection for storage and transportation of your products.

Our co-extruded barrier pouches are available in various barrier levels (high, medium and low), suited to a wide range of perishable products (fresh and processed meat, cheese, fish, sea-shells, dry nuts, olives, etc.), other food and non-food services for retail industries & industrial usage.

## ADVANTAGES:

- ✓ The vacuum pack gives extended shelf life
- ✓ Protective gas keeps the product fresh without preservatives
- ✓ Excellent machine handling, vacuum pouches do not curl
- ✓ Has extremely high gas and moisture barrier properties
- ✓ Possesses very good hot tack, seal properties & transparency
- ✓ Excellent mechanical properties at low thickness, great cost efficiency
- ✓ Very good resistance to puncture and tearing
- ✓ Excellent aroma retention power
- ✓ Retains hygiene during transport and storage
- ✓ The food vacuum pouches reduce the atmospheric oxygen and hence reduce the growth of aerobic bacteria which causes food decay.
- ✓ Food packages also prevent the most volatile components from evaporation.
- ✓ The Pouches are covered with a special treatment inner film at barrier layer that extends its shelf life. This enables them to preserve food four to five times when compared to plastic bags or containers.
