

WATER PRESSURE MEASUREMENT SHOULD NEVER COMPROMISE HOW CLEAN THE WATER IS...

For over 70 years, Square D has provided control solutions which help monitor and automate proper reactions to pressure levels. Our Square D brand water pressure switch is consistently recognized as the #1 switch in the industry and using a Square D water pressure switch not only contributes a long history of reliability and effectiveness to your water system, but ensures that your switch complies with NSF / ANSI 61 health effects criteria for water system components.

So if you want a time-tested, proven water pressure switch that is NSF certified for potable drinking water, make the easy jump to the industry-standard Square D brand water pressure switch. While our competitors may claim to match the same level of service provided by a Square D water pressure switch, time has shown those claims to be quite...fishy...

STABLE. DEPENDABLE.
