

# Safer, touchless automatic hand sanitizer dispensers to reduce infection risk.

Lowering the risk of potential infection at the hand sanitizer station exhibits a great concern for each individual. The solution is a touch-free hand sanitizer system from a global leader in detection technology.

**Simply easy...  
...and SAFER!**

**Telemecanique**  
**Sensors**

A circular inset image showing a close-up of the blue sensor component of the dispenser. A white line points from the sensor to the text below.

1. The sensor detects the hand(s) below the dispenser.

2. After a brief delay, the set amount of sanitizer is released.
