# What is a NES Scan

## What is a NES Health Scan

**Assessing The Bodyfield** Essentially we run 440 different matching tests upon your Human Body-Field (HBF). But first, what really is a Human Body-Field. By the human body-field, we are referring to all of the QED fields that are related to every particle that makes up your body. But what does that really mean? To understand this we need to break it all the way down to the level of physics.

We all know of that awesome experiment that really shook the fabric of our understanding of the universe, called the Double Slit Experiment. This experiment showed us that the world is much more than just particles, as we once thought. It showed us that it behaved as not truly a particle but is really a wave or what is commonly referred to as a "field." Something that was first known as particle-wave duality.

This new understanding tells us that each particle is actually a wave or what we now call a QED (Quantum ElectroDynamic) Field. This field of research is now known as QED Field Theory, a portion of quantum mechanics which is our best understanding of reality to this point.

These QED fields have such an important role in how the particle behaves here on the 3rd dimension that Einstein had a very elegant quote about them. He said: 'The field is the sole governing agency of the particle'

So when we are talking about the Human Body-Field, we are referring to the totality of all of the different QED fields related to each and every particle that makes up your body. We also understand the HBF to be the sole governing agency of the body. Basically, it's a quantum operating system coordinating both energy and the information that drives it.

What Really Happens When you Run a NES Scan?  
by Todd Erb, Nes Health's In-House Practitioner & Trainer TM

This QED body-field is what the BWS scanner is assessing. It does this by generating a field that represents the optimal blueprint of the body-field that our co-founder Peter Fraser decoded over 35 years of research. This field interacts with your body-field as your hand is placed on the scanner. We then measure to see whether or not your body-field is in resonance with our optimal blueprint. Anywhere we identify that your field is not in resonance with our optimal blueprint is known as an energetic blockage or distortion. The same types of energetic blockages that an acupuncturist would identify and work on with needles or other forms of energetic treatments.

But here at NES, we take a more novel approach to unblocking these distortions. We do this on the level of physics, unlike many other approaches that recommend biochemical support (supplementation) or physical modalities to correct these distortions.

# What is a NES Scan

We do this in two ways: miHealth The first is a revolutionary biofeedback device known as the miHealth. This device incorporates the technology of PEMF/TENS/SCENAR and utilizes resonant frequencies and modulated by our corrective information. The same information you may have been found to not be in resonance with. Therefore we want to introduce a stable form of that information to bring your field back into resonance.

PEMF stands for Pulsed Electromagnetic Frequency - PEMF therapy utilizes bursts of low-level electromagnetic radiation to heal damaged tissues and bone, to relieve injury-related pain, and even to stimulate organs.

These pulses, at low frequencies, pass through the skin and penetrate deep into muscles, bones, tendons, and even organs to activate the cell's energy pathways, provide electrons to the system, and provide information needed for the natural repair mechanisms. PEMF is catching on as a non-invasive way to approach injuries, chronic pain, and even conditions like depression and diabetes.

TENS stands for Transcutaneous Electrical Nerve Stimulation - TENS is the use of electrical current produced by a device to stimulate the nerves for therapeutic purposes.

TENS, by definition, covers the complete range of transcutaneously-applied currents used for nerve excitation, although the term is often used with a more restrictive intent, namely to describe the kind of pulses produced by portable stimulators to treat pain.

The unit is usually connected to the skin using two or more electrodes. A typical battery-operated TENS unit is able to modulate pulse width, frequency, and intensity. However you don't need to worry about that with our device because we have tailored the signal to model after the natural impulses of the nervous system.

SCENAR is an acronym for Self-Controlled Energo-Neuro Adaptive Regulator **SC – SELF-CONTROLLED** The SCENAR-type device establishes a biofeedback connection with the body when in use, constantly changing and adapting the properties of the applied electric impulses, in response to the reactions it measures from the body.

# What is a NES Scan

**EN – ENERGO-NEURO** The effect of SCENAR is based on electric impulses of a specific shape; these shapes are patterned after the natural impulses of the human body.

**AR – ADAPTIVE REGULATOR** The SCENAR device not only provides direct therapeutic effects but also activates the natural defenses of the body. By adjusting the voltage potentials of the cells so they have the energy for their own innate healing capabilities.

Standing on the shoulders of these three base technologies, we are able to transmit corrective information over their already powerful & therapeutic frequencies. This is done using the same technology that your favorite radio station uses to send all of that data from the station to your car so the radio can turn it all back into the wonderful music we hear. It also carries the information for the text that displays and tells us what is playing in the given moment. This is known as Frequency Modulation (FM) and is applied in most areas of our modern life. (AM radio stands for Amplitude Modulation.) Basically they turn the music and text into a binary representation of it that is just pure information. This is a set of 1s and 0s that our computer technology understands.

When you are broadcasting a signal you have a certain number of pulses per second, this is known as Hertz. Therefore if the radio station is broadcasting on 98.6Mhz, there are 98.6 million pulses per second that the radio in your car is tuned into. If you then align all the 1s and 0s of the data you are trying to transmit with the signal pulses and remove the pulses that align with a 1 instead of a 0 then the car radio and determine 98.6 million 1s and 0s per second. Which provides a rich enough amount of data for the song and the text to be interpreted by the radio and turned back into the wonderful music we here and show us what song is playing. But this technology doesn't stop with FM radio, it is used in everything from the wifi to the cellphones we all use on a regular basis. Only now we have tailored these frequencies and information for health.

So when the NES scan identifies you are out of resonance with a certain set of information, we can feed back that corrective information to the body-field with the miHealth device via frequency modulation of the electrical signal. This is done over very specific corrective frequencies which are resonant frequencies to the tissues its focused on, providing both resonant energy and the optimal blueprint(information). This effectively revolutionizes the three base technologies into a powerful corrector of the energetic distortions within one's Human Body-Field.

## Structured Water

The second is the main way in which we provide that corrective information, and that is by imprinting that information onto the structure of water itself. But before we talk about Infoceuticals, let's dive into a phenomenon that occurs inside of each and every one of us.

# What is a NES Scan

This is the build-up of what is now known as Exclusion Zone water inside the cells. But what does that really mean?

Dr. Gerald Pollack, out of the University of Washington, has been a shining light for the field of Structured/EZ Water. He has demonstrated that the water inside of our cells is much different than that of water inside of the glass. He calls this phenomenon Exclusion Zone water.

As we all know, the body is mostly made up of water. They say roughly 60%, however, that is referring to volume. Dr. Pollack has shown that when you count the body molecule by molecule we are actually upwards of 99% water. As you can imagine, this water and how it behaves inside the body is crucial for optimal health and wellbeing. This water actually needs to be coherent and structured. This structure needs to be far from a state of chaotic molecules, what we now call "bulk water"/or the water in the glass, to serve one of its most important uses. This highly structured state is more like a liquid, crystalline, gel-like matrix that acts as a water battery for the body. This battery like quality actually helps to power and charge the overall body-field itself.

So how does this water become ordered/structured in nature and take on such profound attributes? It's a process that is catalyzed by the energy of the giant sphere of energy, that greets us every day, we call the sun. This energy from the sun's light passes into our bodies and causes negatively charged water molecules to build up around the hydrophilic surfaces inside of our cells. Hydrophilic surfaces are surfaces in which water will grab onto and bead up versus disperse across the surface as it would on a hydrophobic surface. Most surfaces inside of the body are hydrophilic in nature, from protein surfaces to mitochondrial membranes. Therefore when light enters into the cells, it provides the energy needed to build up this layer of negatively charged water molecules.

This layer of the negatively charged water molecules is what we now refer to as the "Exclusion Zone." This build-up of negative charge ends up creating a magnetic exclusion effect where not only the positively charged molecules but particulate matter within the water gets pushed out of the Exclusion Zone. Recent researchers theorize that a healthy build of up exclusion zone water may help to detox the cells and keep them clean to begin with, as the particulate matter gets repelled away from these zones. But this very important phenomenon is not the main reason why this exclusion zone water is so important.

# What is a NES Scan

The main reason why this structured water is so important is that it acts as a liquid crystalline gel-like battery that helps to power and charges the human body itself. This is because of the separation of the negative and positive charges that we just discussed. Anytime you have a separation of charge you end up with a battery-like effect. Therefore as these layers of negative charge build up the more separation from occurs between the positive and the larger your internal water battery grows. Of course the larger your battery and the more energy you will have for life! But remember, as with everything in life, you require balance. Too much energy can be detrimental as well in the right context.

**Basically, you need a healthy but balanced amount of structured water inside of your cells to have Energy4Life! But you may be asking, what charges this water battery?**

Dr. Pollack explains: "In your cells are multiple batteries with plus and minus charges, separated... [T]he question is, how are these batteries charged? The charge comes from incident radiant energy; light, heat, ultraviolet. All of these absorbed energies separate the charge. The energy that's coming in from outside builds this charge separation and order. This potential energy fills your cells. I think this energy is critical to an understanding of how your cells work."

Now that is interesting! Especially within the context of energy medicine. Essentially what Dr. Pollack has shown is that ambient photon energy (electromagnetic) in the environment has the ability to charge these water batteries inside of our cells. The first time I discovered this work, my mind, of course, went directly to the concepts of Chi, Prana, and the many other words used throughout history to describe the abundant energy that is all around us and our ability to harness that energy for our healing journey. Another concept may be that Chi is really an information field that allows energy to flow more easily. But that's a conversation for another time.

You may have noticed the word "Order" was bolded and underlined in Dr. Pollack's quote. This is because a very crucial detail is key to understanding how water, or more especially structured water, has the ability to hold information. This is the key to the success of not only Infoceticals but also the foundation in which homeopathy worked. Homeopathy began after scientists realized that they could take a biologically active substance, put it into the water, dilute it to the point where virtually none of the substance is left, and yet it still results in the same biological reaction in the body as the non-diluted.

This is because when the water has structure or "order" it has the ability to hold information. As we say here at NES, "information opposes entropy," which means the more information you have, the less chaos there will be. The build-up of those exclusion zone layers takes the water from a state of entropy/chaos to an ordered/structured state. Anytime you have order, you have the ability to hold information.

# What is a NES Scan

One theory is that this happens through arrangement of the oxidation states of oxygen within the structure in a manner that conveys the information, something like the 1s and 0s of computer programming but with much more capacity to store this information. Whether this is the mechanism, though, countless researchers have demonstrated this ability of water to store and play back this information.

When you have structured water and add a biologically active substance to it, you imprint the structure of the water with the energetic signature or information of the substance into the water. Then you can dilute the water to the point that none of the original physical substance remains, but the water still retains the energetic information of the substance.

This information is then picked up by someone's Human Body-Field when they ingest a homeopathic dilution and the field responds as if the physical substance is there – after all, the field doesn't recognize the substance by its material, but by its energy signature. Since homeopathy introduces substances that can create symptoms, this is designed to get the field to provide a healing response, which in turn can help the person from whatever they're trying to heal from.

**Infoceuticals** With NES Infoceuticals, we have brought this idea to the 21st century.

I just described the imprinting of the homeopathic dilution. Basically, you have a negative input coming into the body that the body's response has not been adequate enough to rectify. Then you want to trick the body into thinking there is a new exposure so it mounts another response without creating any more damage in the process. This is what is known as a hormetic stressor and is actually the mechanism by which most health benefits are achieved.

A negative input, hoping for a positive result ...

At NES, we have turned this concept on its head. We are imprinting CORRECTIVE information onto the structure of water instead of a set of negative information. Therefore instead of negative input, hoping the body responds in the manner that you would like, we provide the corrective information necessary to respond the way the body-field needs. Therefore bypassing the need to cause any more stress to the system, real or perceived, and restoring the coherent information needed to unblock the energetic pathways and restore proper function of the field.

We do this by using structured water as a storage medium for information in a similar way to the magnetic tap inside of a cassette tape. Given structured water's charge it make it the perfect carrier for field information.

# What is a NES Scan

NES Health Scan | 7

It begins with spring water that we then deionize, or what is known as deeply demineralized. Therefore, it's an ultra-purified form of water that we begin with. We then add in some minerals from pink sea salt, potassium, and magnesium to aid in the structuring as EZ layers of water build around the hydrophilic surface of the minerals. We then ozonate the water which cleans, oxygenates, and structures the water (bubbles structure water). We then put it through a series of filters and bottle it. The end result is a solution that mimics the internal mineral balance of our blood. The infoceuticals are now ready for the imprinting process where we add information onto the structure.

The way I like to conceptualize this is by thinking of the water molecules like numbers. If I have a bag of numbers that are just jumbled up in the bag, they are not much good for conveying any information or meaning. But if I take those numbers and put them up on a wall, then I have structure and the ability to hold information. But just because we take all of the numbers out of the bag and put them up on the wall doesn't mean they are in the right order to represent the specific information we want. So we need to arrange those numbers according to whether Infoceutical we are imprinting. From a physics perspective this is a coherence effect and is stored within the field of the charged structured water.

# What is a NES Scan

We then begin our imprinting process. The bottle is placed into the imprinter where it is exposed to a variety of energetic fields. The first is a powerful 10,000-volt(10kv) electrostatic field. This powerful field is required for the imprinting process. Just like the scan, a magnetic field is required for its success. There are also a variety of red, green, infrared and UV biophotonic lasers, as well as tesla coils, all of which are modulated by mathematical codes of corrective information. By introducing this information via multiple sources into the field of the structured water while under this powerful 10kv electrostatic field it is now imprinted. Then the bottles of newly imprinted Infoceuticals exit the other end of the imprinter and that information is sealed onto that structure when the 10kv electrostatic field is removed. This is because you would need to subject that water to another field of equal or greater strength to open back up the structure to be manipulated. This makes Infoceuticals very stable, especially in comparison to what we like to call the "light imprints" such as dilutions(which rely solely on the Earth's weak magnetic field) or other less powerful types of electronic imprinting. This results in very stable, highly energized, structured, imprinted liquid remedies that provide corrective information to one's body-field.

**The Protocol** The system prioritizes your energetic blockages and recommends the top 5 for your infoceuticals as well as your top priority points for use with the miHealth. Our average dose is 15 drops per infoceutical. You can consume them directly or place them into a glass of water and drink that, whatever works best for you. The moment you come in contact with that information it is effectively transmitted to your Human Body-Field, effectively rejuvenating the energetic blockages.
