

Home Building Process

The number of differences between traditional site-built homes and factory-built homes have shrunk in recent years, with factory-built housing quickly meeting and exceeding the standards long viewed to be the prerogative of site builders. While factory-built structures are constructed to the same national and provincial standards as site-built homes, the exceptional quality of factory built homes becomes strikingly apparent once you examine the home-building process.

With materials and construction performed within climate-controlled facilities, by dedicated trained professionals, and under the inspection of third party agencies, our homes are not plagued by the challenges of rotating seasonal staff or inclement weather. Likewise, daily ongoing inspection and training ensures that challenges are met early and often, reducing the possibility of undiagnosed concerns.

By using automation within the factory floor, from the cuts of lumber to the raising of walls, we can ensure stability and consistency across all jobs performed. This consistency and environmental focus adds to the exceptional energy efficiency of the final home, ensuring the home saves you money.

Finally, by using our one-of-a-kind Ridge Wall System, we build strength into the finished product. Through lateral bracing, double continuous headers, continuous vapor barriers, and compressed floor-to-wall-to-ceiling fastenings, we minimize deflection and allow for the future craning or rolling into place upon arrival. It is this strength that allows for our industry-leading 20-year structural warranty.

THE INDUSTRY'S MOST COMPREHENSIVE WARRANTY

Triple M Housing is pleased to offer the industry's first and only 20-year warranty. We ensure the products we use are held to the highest standards. We are proud to use quality products and superior methods that offer our customers peace of mind in their largest lifetime purchase.
