If a combination of valuation approaches or methodologies is adopted, appropriate weights are assigned to arrive at a single value. Relative values are usually derived by using similar valuation approaches, methodologies and weights. However, the use of differing methodologies or approaches may be justified in circumstances, e.g., a merger of a listed company and an unlisted company, or where the listed company is infrequently traded.

2.1.3 As part of the valuation exercise, we have been provided with the unaudited financial results of the Companies on 1st October 2025. We have taken into consideration the current market parameters in our analysis and have made adjustments for additional facts made known towards the date of our Report. The Management has informed us that there are no unusual or abnormal events in the companies materially impacting their operating/financial performance after 31 March 2025 till the report date. Further, we have been informed that all material information impacting the valuation has been disclosed to us. We have relied on such information while arriving at the Share Exchange Ratio for the Proposed Transaction.

2.1.4 In the event, that either of the Companies restructure their equity share capital by way of share split/ consolidation/ issue of bonus shares before the Proposed Transaction becomes effective, then the issue of shares pursuant to the Share Exchange Ratio recommended in this report shall be adjusted accordingly to take into account the effect of any such corporate actions.

2.2.2 The definition of "Fair value" as per International Valuation Standards, 2022 ("IVS") issued by the International Valuation Standards Council ("IVSC"), is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants al the valuation date.

The intangible elements of going concern value result from factors such as having a trained workforce, an operational unit, the necessary licenses. and procedures in place etc.
- As is-where-is basis - considers the current use of the asset which may or may not be its highest and best use.

8 APPROACH & METHODOLOGY

8.1. The Scheme contemplates the amalgamation of Arugn Technologies Private Limited into and with Planetcast Media Services Private Limited. Arriving at the fair Share Exchange Ratio for the Proposed Transaction would require determining the relative value of equity shares of Arugn Technologies Private Limited and Planetcast Media Services Private Limited. These values are to be determined independently, but on a relative basis for the respective Companies, without considering the effect of the proposed amalgamation.

8.2 Our choice of approach and methodology for the valuation has been arrived at using usual and conventional approaches and methodologies adopted for mergers and are reasonable judgement in an independent and bona fide manner.

8.3 Valuation approach and methodologies

8.3.1 The standard of value used in our analysis is fair value, which is often defined as the price, in terms of cash or equivalent, that a buyer could reasonably be expected to pay, and a seller could reasonably be expected to accept, if the business were exposed for sale on the open market lor a reasonable period of time, with both buyer and seller being in possession of the pertinent facts and neither being under any compulsion to act.

8.3.2 There are several commonly used and internationally accepted methods for determining the fair value of companies, which have been considered in the present case, to the extent relevant and applicable, Due cognizance and consideration have been given to International Valuation Standards, 2022 ("IVS") Valuation Approaches and Methods in valuing the Transferor Company and Transferee Company.

8.3.3 It should be understood that the valuation of any company or its assets is inherently subjective and is subject to certain uncertainties and contingencies all of which are difficult to predict and are beyond our control. In performing our analysis, we made assumptions with respect to

Basement, B-002, Antriksh Greens Sector 50 Noida 201301 | abhi@finexadvisors.in | +91 88005 72090

industry performance and general business and economic conditions, many of which are beyond the control of the company. In addition, this valuation will fluctuate with changes in prevailing market conditions, the conditions and prospects, financial and otherwise, of the respective Company, and other factors which generally influence the valuation analysis.

8.3.4 The application of any particular method of valuation depends on the purpose for which the valuation is done. Although different values may exist for different purposes, it cannot be too strongly emphasized that a valuer can only arrive at one value for one purpose. Our choice of the methodology of valuation has been arrived at using usual and conventional methodologies adopted for transactions of a similar nature and our reasonable judgment, in an independent and bona fide manner is based on our previous experience of assignments of a similar nature.

8.3.5 There are several commonly used and accepted methods for determining the value and the Share Exchange Ratio which have been considered in the present case, to the extent relevant and applicable, including:

a) Market Approach:

-Market Price method

-Comparable Companies Multiples

-Comparable Transaction Multiple Method

b) Income Approach: Discounted Cash Flows Method

c) Cost Approach: Net Asset Value Method

8.3.6 As discussed below for the Proposed Transaction, we have considered these methods to the extent relevant and applicable.

8.3.7 This valuation could fluctuate with the lapse of time, changes in prevailing market conditions and prospects, industry performance and general business and economic conditions financial and otherwise of the Companies, and other factors which generally influence the valuation of Companies and their assets.

8.3.8 We have relied on the judgment of the Management as regards contingent and other liabilities.

8.3.9 The valuation methodologies, as may be applicable, which have been used to arrive at the value of the Companies are discussed hereunder.

8.4 Market Price (MP) Method

8.4.1 The market price of an equity shares as quoted on a Stock Exchange is generally considered as the value of the equity shares of that company where such quotations are arising from the shares being regularly and freely traded in, subject to the element of speculative support that may be inbuilt in the value of the shares. But there could be situations where the value of the share as quoted on the stock market would not be regarded as a proper index of the fair value of the share, especially where the market values are fluctuating in a volatile capital market. Further, in the case of a merger, where there is a question of evaluating the share price of one

Basement, B-002, Antriksh Greens Sector 50 Noida 201301 | abhi@finexadvisors.in | +91 88005 72090

Arugn Technologies Private Limited
PLANETCAST MEDIA SERVICES PVT. LTD.

company against that of another, the volume of transactions and the number of shares available for trading on the stock exchange over a reasonable period would have to be of a comparable standard.

8.4.2 The equity shares of Arugn Technologies Private Limited and Planetcast Media Services Private Limited are not listed on any stock exchange and thus, Market Price method is not used for the purpose of evaluation.

8.5 Comparable Companies Market Multiple ("CCM") Method

8.5.1 Under this method, the value of the equity shares of a company is arrived at by using multiples derived from valuations of comparable companies, as apparent through stock market valuations of listed companies. This valuation is based on the principle that market valuations, taking place between informed buyers and informed sellers, incorporate all factors relevant for the assessment of the value of the company.

8.5.2 Relevant multiples need to be chosen carefully and adjusted for differences between the circumstances. In identifying the comparable companies, the business description and various operating metrics are to be analysed.

8.5.3 In the present valuation analysis, we carried out research on comparable companies listed in India however, in the absence of exact comparable companies undertaking similar basis, we have not used this method for the purpose of our evaluation.

8.6 Comparable Companies Transaction Multiple (CTM) Method

8.6.1 Under the CTM method, the value of the equity shares of a company is arrived at by using the prices implied by reported transactions/ deals of comparable companies.

8.6.2 Relevant multiples need to be chosen carefully and adjusted for differences between the circumstances. A version of the CM includes deriving the value of the company from a transaction involving the company's own securities, with appropriate adjustments as necessary.

8.6.3 We have not used comparable transactions multiples to value the Companies due to the lack of availability of similar transactions along with complete data relating to premiums/discounts involved in such transactions which have taken place in the last 12-24 months.

8.6.4 The Board of Directors of the Transferee Company are not approving/ considering issuance of any preferential shares.

8.6 Discounted Cash Flows (DCF) Method

8.6.1 Under the DCF method, the projected free cash flows to the firm are discounted at the weighted average cost of capital. The sum of the discounted value of such free cash flows is the value of the firm ("Enterprise Value" or "EV").

8.6.2 Using the DCF analysis involves determining the following:

Estimating future free cash flows:

Basement, B-002, Antriksh Greens Sector 50 Noida 201301 | abhi@finexadvisors.in | +91 88005 72090

Arugn Technologies Private Limited

PLANETCAST MEDIA SERVICES PVT. LTD.

Free cash flows are the cash flows expected to be generated by the company that is available to all providers of the company's capital - both debt and equity.

Appropriate discount rate to be applied to cash flows, i.e. the cost of capital.

8.6.3 This discount rate, which is applied to the free cash flows, should reflect the opportunity cost to all the capital providers (namely shareholders and creditors), weighted by their relative contribution to the total capital of the company. The opportunity cost to the capital provider equals the rate of return the capital provider expects to earn on other investments of equivalent risk.

8.6.4 The values so computed by discounting the cash flows to the firm is adjusted for net borrowings, surplus assets including investments, minority or non-controlling interests, equity instruments granted as part of the share-based payment, and other matters to arrive at an aggregate equity value of the company.

8.6.5 Management of PMSL has prepared its forecast and a high-level business plan has been made available to us by the management, which has been used to arrive at the value herein. As part of our analysis, we have suitably limited the base cash flow projections to five years. However, since Arugn alongwith the promoters holds 100% equity in PMSL directly or indirectly, no valuation is required and the share swap ratio can be based on the shareholding ratio.

8.7 Net Asset Value (NAV) Method

8.7.1 The asset-based valuation technique is based on the value of the underlying net assets of the business either on a book value basis or realisable value basis or replacement cost basis. The cost approach assumes that a prudent investor would pay no more for an entity than the amount for which he could replace or re-create it or an asset with similar utility. Under a going-concern premise, the cost approach usually is best suited for valuing asset-intensive companies, such as investment or real estate holding companies, or companies with unstable or unpredictable earnings.

8.7.2 In the present case, since Arugn Technologies Private Limited is a newly incorporated company, we have used net asset value for the purpose of our evaluation.

9 BASIS OF VALUATION AND SHARE EXCHANGE RATIO

9.1 The premise of arriving at the valuation and Share Exchange Ratio for the Proposed Transaction would have to be determined after taking into consideration all the factors and methodologies mentioned hereinabove. The valuations and Share Exchange Ratio are based on the various methods explained herein earlier and various qualitative factors, business dynamics and growth potentials of the relevant company, having regard to the information base, critical underlying assumptions and limitations. It is, however, important to note that in doing so we are not attempting to arrive at the absolute equity values of the companies but at their relative values to facilitate the determination of a fair Share Exchange Ratio, For this purpose, it is necessary to give appropriate weights to the values arrived at under each methodology.

9.2 While we have provided our recommendation of the fair equity Share Exchange Ratio based on the information available to us and within the scope and constraints of our engagement, others may have a different opinion as to the fair equity Share Exchange Ratio. The final responsibility for the determination of the exchange ratio at which the Proposed Transaction shall take place will be with the Board of Directors of the respective Companies who should take into account other factors such as their own assessment of the Proposed Transaction and input of other advisors.

9.3 As considered appropriate, we have applied methodologies within the approaches discussed above and arrived at an assessment of the value of the companies forming a part of the amalgamation for computation of the Share Exchange Ratio. To arrive at the consensus on the Share Exchange Ratio, suitable minor adjustments/ rounding off have been done in the relative values arrived at by us.

10 CONCLUSION

10.1 Based on the foregoing, and after considering the relevant factors and circumstances as discussed and outlined hereinabove, we recommend the following equity share exchange ratio for the proposed amalgamation of Arugn Technologies Private Limited with and into Planetcast Media Services Private Limited:

11306.8864 equity shares of the face value of INR 10/- (Rupees Ten) each credited as fully paid up in the share capital of Planetcast Media Services Private Limited for every 1 fully paid-up equity shares of the face value of Rs. 10/- (Rupees Ten) each held in Arugn Technologies Private Limited.
