

Caregiver: Please provide this information sheet to your organizational leadership

Embrace the new standard of care for safe patient transfers

The Healthcare industry has the highest number of time-lost injuries of any industry. The most common injuries reported are strains and sprains, with the **shoulders and lower back** being the most often effected. These injuries can occur even with current transfer devices.

Without the Altha Care Harness:
Arms and Back take stress

With the Altha Care Harness:
Legs and Pelvic gridle used

Can be used in conjunction with existing Equipment

The Altha Care Harness is compatible with many safe transfer systems currently used. The effectiveness of existing specialty sheets, boards, and other components is enhanced using this product, while availability and effectiveness further encourages utilization by bedside caregivers.

Worn by caregiver, higher rate of use than existing equipment

Caregivers are much more likely to use the Altha Care Harness due to its availability and speed than current expensive alternatives that go unused.
