2019 CPT and ICD-10 Update

Doing It Right the First Time
• QPP and MACRA Update
• EM Changes now and in the Future
• Surgery Section
• Radiology Changes
• Pathology Changes
• ICD-10 Updates

Some Miscellaneous Issues First

The 2019 MPFS conversion factor is increasing slightly from $35.9996 this year to $36.0391.
CMS will not apply the multiple procedure payment reduction policy to office visits and other services done at the same encounter.

CMS is continuing to help small practices in Year 3 of Quality Payment Program (QPP) by increasing the small practice bonus to six points, but including it in the Quality performance category score of clinicians in small practices instead of as a standalone bonus.
QPP and MIPS

CMS also added an additional low-volume threshold exemption to MIPS for next year. To be excluded, providers or groups need to meet at least one of the following conditions:

1. Have $90,000 or less in Medicare Part B allowed charges for covered professional services.
2. Provide care to 200 or fewer Part B-enrolled patients.
3. Provide 200 or fewer covered professional services under the PFS.

The minimum period for each performance category remains unchanged, so quality and cost stay at 12 months while improvement activities and promoting interoperability remain at a continuous 90-day period.

However, the weighting to the final score of the cost and quality categories have both changed. Cost increases from 10 percent to 15 percent of the total score, and quality drops from 50 percent to 45 percent.
Currently eligible clinician types include physicians, physician assistants, nurse practitioners, clinical nurse specialists, certified registered nurse anesthetists and groups that include such professionals (required by statute). Consistent with the MACRA statute, CMS is expanding participation in MIPS to include: physical therapists, occupational therapists, qualified speech-language pathologists, qualified audiologists, clinical psychologists, and registered dieticians or nutrition professionals. CMS estimates that this change will expand the pool of MIPS-eligible clinicians by 20,240.

</table>
We proposed to expand this policy to further simplify the documentation of history and exam for established patients such that, for both of these key components, when relevant information is already contained in the medical record, practitioners would only be required to focus their documentation on what has changed since the last visit or on pertinent items that have not changed, rather than redocumenting a defined list of required elements such as review of a specified number of systems and family/social history. Practitioners would still review prior data, update as necessary, and indicate in the medical record that they had done so. Practitioners would conduct clinically relevant and medically necessary elements of history and physical exam, and conform to the general principles of medical record documentation in the 1995 and 1997 guidelines. However, practitioners would not need to re-record these elements (or parts thereof) if there is evidence that the practitioner reviewed and updated the previous information.

Chief Complaint and HPI

Additionally, we are clarifying that for E/M office/outpatient visits, for new and established patients for visits, practitioners need not re-enter in the medical record information on the patient’s chief complaint and history that has already been entered by ancillary staff or the beneficiary. The practitioner may simply indicate in the medical record that he or she reviewed and verified this information; and
Review and Validated

For established patient office/outpatient visits, when relevant information is already contained in the medical record, practitioners may choose to focus their documentation on what has changed since the last visit, or on pertinent items that have not changed, and need not re-record the defined list of required elements if there is evidence that the practitioner reviewed the previous information and updated it as needed. Practitioners should still review prior data, update as necessary, and indicate in the medical record that they have done so.

Teaching Physicians and Residents

Removal of potentially duplicative requirements for notations in medical records that may have previously been included in the medical records by residents or other members of the medical team for E/M visits furnished by teaching physicians.
New HCPCS Codes for 2019

Brief communication technology-based service, e.g. virtual check-in (HCPCS code G2012) and Remote evaluation of recorded video and/or images submitted by an established patient (HCPCS code G2010)

G2012

(Brief communication technology-based service, e.g. virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5-10 minutes of medical discussion)

G2010

(Remote evaluation of recorded video and/or images submitted by an established patient (e.g., store and forward), including interpretation with follow-up with the patient within 24 business hours, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment)
Definitions

Practitioners could be separately paid for the brief communication technology-based service when the patient checks in with the practitioner via telephone or other telecommunications device to decide whether an office visit or other service is needed. This would increase efficiency for practitioners and convenience for beneficiaries.

Similarly, the service of remote evaluation of recorded video and/or images submitted by an established patient would allow practitioners to be separately paid for reviewing patient-transmitted photo or video information conducted via pre-recorded “store and forward” video or image technology to assess whether a visit is needed.

2021 Changes

Reduction in the payment variation for E/M office/outpatient visit levels by paying a single rate for E/M office/outpatient visit levels 2 through 4 for established and new patients while maintaining the payment rate for E/M office/outpatient visit level 5 in order to better account for the care and needs of complex patients;
2021 Changes

Permitting practitioners to choose to document E/M office/outpatient level 2 through 5 visits using medical decision-making or time instead of applying the current 1995 or 1997 E/M documentation guidelines, or alternatively practitioners could continue using the current framework;

2021 Changes

Beginning in CY 2021, for E/M office/outpatient levels 2 through 5 visits, we will allow for flexibility in how visit levels are documented - specifically, a choice to use the current framework, MDM, or time. For E/M office/outpatient level 2 through 4 visits, when using MDM or current framework to document the visit, we will also apply a minimum supporting documentation standard associated with level 2 visits. For these cases, Medicare would require information to support a level 2 E/M office/outpatient visit code for history, exam and/or medical decision-making;
2021 Changes

When time is used to document, practitioners will document the medical necessity of the visit and that the billing practitioner personally spent the required amount of time face-to-face with the beneficiary;

Implementation of add-on codes that describe the additional resources inherent in visits for primary care and particular kinds of non-procedural specialized medical care, though they would not be restricted by physician specialty. These codes would only be reportable with E/M office/outpatient level 2 through 4 visits, and their use generally would not impose new per-visit documentation requirements.

2021 Changes
Adoption of a new “extended visit” add-on code for use only with E/M office/outpatient services. To report extended time for E/M office and other outpatient E/M services when face-to-face time exceeds 34 minutes for an established patient or 38 minutes for a new patient whose E/M service is reported as level 2 through 4 and to report a level 5 code with prolonged service add-on code when face-to-face time exceeds 69 minutes for established patients or 89 minutes for new patients.

CPT Changes 2019

The new current procedural terminology (CPT®) codes have been released with 335 code changes in 2019. There were many code revisions with guideline, description and instructional note changes. Let’s look at the highlights of many new CPT codes for 2019.
Remote Monitoring

99453: Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, pulse oximetry, respiratory flow rate), initial; set-up and patient education on use of equipment

99454: Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, pulse oximetry, respiratory flow rate), initial; device(s) supply with daily recording(s) or programmed alert(s) transmission, each 30 days

Remote Monitoring

99457 (Remote physiologic monitoring treatment management services, 20 minutes or more of clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month)

Use 99457 for time spent managing care when patients or the practice do not meet the requirements to report more specific services - CPT explains.
The Rule states that CPT Code 99457 describes only professional time and “therefore cannot be furnished by auxiliary personnel incident to a practitioner’s professional services.”
More to Come...

CMS stated in the Rule that it plans to issue further guidance to help practitioners and stakeholders determine the scope of service and better interpret the code descriptors listed above. Specifically, we can expect guidance on (i) the types of technology that can be used to provide these new RPM services, (ii) whether the descriptor for CPT Code 99454 includes transmissions that occur other than daily, and (iii) whether CPT Code 99453 can be furnished via telecommunication technology.

Fee Data
Interprofessional Consults

99446: Interprofessional telephone/internet assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional; 5-10 minutes of medical consultative discussion and review

99447: Same as 99446, but 11-20 minutes of medical consultative discussion and review

99448: Same as 99446, but 21-30 minutes of medical consultative discussion and review

99449: Same as 99446, but 31 minutes or more of medical consultative discussion and review

Interprofessional Consults

99451 (interprofessional telephone/internet/electronic health record assessment and management service provided by a consultative physician, including a written report to the patient's treating/requesting physician or other qualified health care professional, 5 minutes or more of medical consultative time)

*99452 (interprofessional telephone/internet/electronic health record referral service[s] provided by a treating/requesting physician or other qualified health care professional, 30 minutes)
Interprofessional Consults

- 99446  $17.92
- 99447  $35.52
- 99448  $53.44
- 99449  $71.04
- 99451  $36.56
- 99452  $36.56

New for 2019

Imaging Guidance

When imaging guidance or imaging supervision and interpretation is included in a surgical procedure, guidelines for image documentation and report, included in the guidelines for Radiology (Including Nuclear Medicine and Diagnostic Ultrasound), will apply. Imaging guidance should not be reported for use of a nonimaging-guided tracking or localizing system (e.g., radar signals, electromagnetic signals). Imaging guidance should only be reported when an imaging modality (e.g., radiography, fluoroscopy, ultrasonography, magnetic resonance imaging, computed tomography, or nuclear medicine) is used and is appropriately documented. 

**FNAB and a Core Needle Biopsy (CNB)**

The FNAB involves aspiration of material with a fine needle and cytological examination of the cells.

A core needle biopsy involves obtaining a core sample with a larger bore needle and histopathologic examination of the tissue.

---

**2019 FNAB Codes**

**10021** (Fine needle aspiration biopsy; without imaging guidance) will be revised to state “Fine needle aspiration biopsy; without imaging guidance; first lesion.” When appropriate, a provider would report a new add-on code:

**10004** (Each additional lesion [List separately in addition to code for primary procedure]).

Four more primary and add-on pairings will be available to report FNAB with:

(10005-10006) – Ultrasound;
(10007-10008) – Fluoroscopy;
(10009-10010) – CT; or
(10011-10012) – MRI

Biopsy Codes Deleted

11100 (Biopsy of skin, subcutaneous tissue and/or mucous membrane [including simple closure], unless otherwise listed; single lesion); and

+11101 (...; each separate/additional lesion [List separately in addition to code for primary procedure])

11100 (Biopsy of skin, subcutaneous tissue and/or mucous membrane [including simple closure], unless otherwise listed; single lesion); and

+11101 (...; each separate/additional lesion [List separately in addition to code for primary procedure])

11102 (Tangential biopsy of skin [e.g., shave, scoop, saucerize, curette]; single lesion) and

+11103 (...; each separate/additional lesion [List separately in addition to code for primary procedure])

The definition states that the biopsy is performed - with a sharp blade, such as a flexible biopsy blade, obliquely oriented scalpel or curette to remove a sample of epidermal tissue with or without portions of the underlying dermis

11104 Punch biopsy of skin, single lesion

+11105 (...; each separate/additional lesion [List separately in addition to code for primary procedure]) also includes a simple closure

11106 Incisional biopsy of skin, single lesion

+11107 (...; each separate/additional lesion [List separately in addition to code for primary procedure]) also includes a simple closure

### Vulvectomy Notes

- [56630](#) Vulvectomy, radical, partial; (For skin graft, if used, see 15004-15005, 15120, 15121, 15240, 15241)
- [56631](#) with unilateral inguinal lymphadenectomy
- [56632](#) with bilateral inguinal lymphadenectomy
- [56633](#) (For partial radical vulvectomy with inguinal lymph node biopsy without complete inguinal lymph node biopsy, use 56630 in conjunction with 38531)
- [56634](#) Vulvectomy, radical, complete; with unilateral inguinal lymphadenectomy
- [56635](#) with bilateral inguinal lymphadenectomy
- [56637](#) (For complete radical vulvectomy with inguinal lymph node biopsy without complete inguinal lymph node biopsy, use 56633 in conjunction with 38531)
In addition, the new guidance warns practices that nonimage-guided tracking or localization – such as radar should not be reported with radiology codes.

According to CPT: - Imaging guidance should only be reported when an imaging modality (e.g., radiography, fluoroscopy, ultrasonography, magnetic resonance imaging, computed tomography, or nuclear medicine) is used and is appropriately documented the new guidance states.

According to the supervision and interpretation, imaging guidance section, all imaging guidance codes require image documentation in the patient chart and a description of the image guidance in the procedure note.

Radiological supervision and interpretation (S & I) documentation must include documentation in the patient’s “permanent record” and a procedure or separate image report “that includes written documentation of interpretive findings of information contained in the images and radiologic supervision of the service.”

In addition, new text in the written reports section states that for the purposes of descriptors for imaging services, the images “must contain anatomic information unique to the patient for which the imaging service is provided.”
CPT codes 77058 and 77059 were deleted.

Four new breast MRI procedures were added (77046-77049). Codes are selected based on laterality (unilateral vs. bilateral) and with or without contrast material.

**Breast MRI Procedures**

- **77046** Magnetic resonance imaging, breast, without contrast material unilateral
- **77047** bilateral
- **77048** Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD real-time lesion detection, characterization and pharmacokinetic analysis), when performed unilateral 3 CPT Changes:
  - **77049** bilateral

(77051 has been deleted. To report, see 77065, 77066)
(77052 has been deleted. To report, use 77067)
Due to frequent use, many services previously classified with the Tier 2 molecular pathology codes are now described using standalone Tier 1 codes like 81171-81183.

The BRCA1 & BRCA2 codes have also been revised due to changes in clinical practice and are listed under Tier 1 codes.
New Flu Vaccine

CPT code 90689 was added to report an inactivated adjuvanted preservative free flu vaccination.

Influenza immunisation in WA children in 2017

47% of people who attended an ED with flu-like illnesses were children aged 0 to 4 years.

27% of children under 5 diagnosed with flu were hospitalised.

Reported reactions were mild. Less than 1% of parents sought medical advice.

Only 15% of children under 5 were protected against flu through immunisation.

Don’t put your child at risk, get the flu vaccine today.
