

IS IT AN EMERGENCY, OR JUST AN URGENCY?

When to call an ambulance, go to the emergency room, or visit urgent care.

When seeking medical care, taking a minute before deciding where to go can mean better, more efficient care for everyone. And it can even save your life!

Eisenhower Urgent Care

We operate three facilities designed to treat patients on a walk-in basis:

- Fractures, sprains, cuts and scrapes, rashes and minor injuries
- Infections, including those of the ear, throat, sinus and urinary tract
- Minor colds or flu-like illness
- Suture removal or wound check

Each location also provides routine vaccinations and school physicals. The facilities offer onsite laboratory capabilities such as urinalysis, influenza screening, pregnancy testing and glucose monitoring. Onsite radiology services allow for quick diagnosis of fractures and sprains. If needed, patients may be referred to a physician for specialized medical care or hospitalization.

To reach one of our three Urgent Care locations, call 760-834-3593.

Rancho Mirage

72780 Country Club Drive, Building B, Suite 203

Palm Springs

Eisenhower Health Center at Sunrise
151 South Sunrise Way, Suite 300

La Quinta

Eisenhower George and Julia Argyros Health Center
45280 Seeley Drive

ATTENTION: ORTHOPEDIC PATIENTS

Our Urgent Care providers work with our orthopedics team to ensure patients who need follow up at Eisenhower Desert Orthopedic Center are given the referral they need. Appointments are scheduled for when the orthopedics specialist feels it's best to see you, which may be two weeks after the injury occurs (after swelling is reduced). Some sprains and other conditions may not need further care after your Urgent Care visit.

Eisenhower Tenny Emergency Department

We are a designated Stroke Center, as well as an accredited Chest Pain Center, and we are equipped to treat acute injuries and illness.

Call 911 if you suspect heart attack, stroke or any other life-threatening emergency!

Ambulance Transportation

In a life-threatening emergency, the sooner a patient is treated, the better the chances of survival. In our area, an ambulance typically arrives in five minutes or less, bringing vital equipment and trained medics who can stabilize a patient and begin some treatments before even reaching the hospital.

It's a common misconception that driving a loved one to the emergency room is faster or better — in fact, when it comes to life threatening symptoms, the opposite is true.
