

# What If..Wombats Were Web Developers?

Find the six differences between the two drawings. The answers are upside down below.

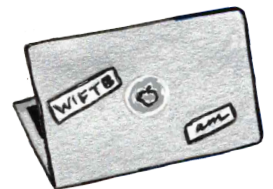

Differences: Logo on computer, phone on table, logo on hoodie, book name, additional pencil to right of to do list, color of background below desk.

## Did You Know?

Wombats can weigh up to 85 pounds at full size and be up to 3 feet in length. They are surprisingly fast runners, clocking speeds of up to 25 miles per hour. They also have fur that glows in the dark under a UV light. Scientists are still trying to figure out why.

Web developers create, test, and maintain websites (aka they create the Internet). A growing area of focus for developers is ensuring a site is accessible for all visitors, including folks who use adaptive technology like screen readers. This is an essential skill to ensure the work web developers do can be used by all.

This drawing is a part of the "What If?" career exploration coloring book which highlights animals & careers that are not often featured in children's books.
