

Precast Fence Post Footings

Why mix and pour concrete in the field if you can just order your fence post footings from Conigliaro Block?

Conigliaro Block manufactures precast concrete footings in many different sizes for fence installers. Each footing comes with a vertical galvanized metal sleeve ready to receive your fence post as well as two horizontal side sleeves to use as pick points.

The footings can be placed in your auger holes using either a piece of equipment or a heavy duty dolly.

We pour footings in many different lengths and diameters – perfect for any project. We can also change the size of the imbedded post sleeve to meet your specifications.
