

Temporary Concrete Jersey Barriers Rent or Purchase

Conigliaro Block manufactures Precast Temporary Concrete Jersey Barriers. Our standard barriers are made with either standard concrete (3000 psi, 4000 or 5000 psi) or recycled-content Agg-Crete (approximately 2000 - 3000 psi).

Purchase or Rent

Our Jersey Barriers are available for purchase or rent and Conigliaro Block will also transport and place the barriers at your jobsite or place of business. If your budget is limited, consider our rental program.

Our barriers are manufactured **similar** to the 2017 Massachusetts DOT Specification for "Temporary Concrete Barrier, MASH TL-2". See attached specification.

Please note: Our barriers do not meet all aspects of this specification, for example we do not hot-dip galvanize our reinforcement and we manufacture our barriers out of several different mixes.

Our Standard Jersey Barrier weighs about 3,900 to 4400 pounds, is 10 feet long, 32" tall and 24" wide at the base.

Normally ten (10) barriers are shipped per truck.
