

# INNOVATIVE SYSTEMS

WHEN INNOVATION MEETS EXPERTISE

# COMPANY PROFILE

# INTRODUCTION

This is a fairly new domain, that is rapidly expanding and improving. Our professional project managers ensure the completeness of proposal documentation (brochures, datasheets and specification) all the way to completion of the project. Their follow through also includes after sale support and follow up in a very professional ways.

We deliver a wide range of services to commercial, educational and government sectors. We have maintained annual increase in turnover.

The department has a dedicated team of network engineers that use the latest test equipment with expertise in CAT 6/6A UTP, Fiber Optics, Data Center preparation, wireless networks, Servers and backup systems, as well as excellent network design and implementation skills.

## INNOVATIVE SYSTEMS

WHEN INNOVATION MEETS EXPERTISE

# SYSTEMS INFRASTRUCTURE SOLUTIONS

Correctly designed, functional and stable systems and application infrastructure is a necessary base of safe and reliable IT operation in all the individual partial sections (Starting from operating systems on servers, client stations and mobile devices, up to systems for IT control and administration). The main activity of system infrastructure services is the realization of robust and safe infrastructure bringing stable, safe and user-friendly environment at servers, client stations and mobile devices. It also provides the users with fast and efficient transfer and sharing of information, efficient development of type documents, and access to external and internal information.

At **INOSYS**, we understand that your infrastructure technology needs are directly tied to your organization's unique environment in terms of business requirements, size and operational challenges. We therefore offer infrastructure solutions that are designed to specifically give your organization the knowledge to gain maximum from your infrastructure. Keeping the people involved in the common task will help them to achieve their goals. Collaborative systems such as Mail, Fax, Calendaring, Audio and Video conference systems are the basis of cooperative work. With many applications riding over the messaging systems to touch the users, it becomes critical to ensure that users are well connected.

# DATACENTER MANAGEMENT SOLUTIONS

Proper network and systems management simplifies management of your network and system infrastructure, and also ensures the availability and performance of business critical processes with centralized, adaptive and secure management. Continuous discovery and self-management of the health and performance of heterogeneous environment helps reduce risks caused by IT complexity.

## IT SECURITY SERVICES

With the current connected world of internet, the need of a proactive, powerful and effective security system is a must. **INOSYS** is leading in deploying products and integrated security solutions from various technology vendors. Our services include and are not limited to:

- System Security Architecture Design
- Implementation of Security Devices
- Access Control Systems
- Authentication and Authorization System
- Security Event Management Systems

# IT SERVICES MANAGEMENT

Providers of IT services can no longer afford to focus on technology and their internal organization. They now have to consider the quality of the services they provide and focus on the relationship with customers. IT Service Management is a discipline for managing IT systems centered on the customer's perspective of its contribution to the business. Our Service Management Solutions help you align critical business operations with the underlying technology operations.

Providing services has never seen tougher times than it is experiencing now with the growing number of users and applications to support, growing reliance on IT, and an increasingly compounded IT environment. IT departments need to address this problem and work out ways to solve it. Service Support Solutions help to provide information on incidents, problems, changes, and knowledge management capabilities. These agreement service support and integrate the service desk with the business. These solutions are made on a proven scalable architecture that is ITIL-compliant.

# LINE OF BUSINESS

Whatever you need from design, supply or commissioning of network hardware and software, "INOSYS" provides it.

# PASSIVE NETWORKS

## Cabling Infrastructure

### CABLING

We have a team of experts for cabling UTP & Fiber Optics in the fastest timely manner. We guarantee a professional installation for your satisfaction.

### TERMINATION

We have certified technicians in Passive Networking. Our technicians have experience in UTP & Fiber Optics termination.

### TESTING

We use the best testers to give you reports about installed nodes. In this way you can guarantee that your cables are terminated in the right way.

### LABELING

All nodes are numbered and labeled. In the case of non-functioning node, labels will come handy for your troubleshooting.

# PASSIVE NETWORKS

## Data Centers

### RAISED FLOOR SYSTEMS

We have a professional team for installing raised floors in your data rooms, which enable organizing cables as well as absorbing any static electricity from objects.

### FIRE FIGHTING SYSTEMS (FM200)

"INOSYS" protects your data rooms against fire using a very advanced system. In the event of fire, the system shall extinguish the fire before it spreads around without affecting any component inside the data center.

### COOLING SYSTEMS

Specialized cooling system is provided for your Data Center to keep your equipment at the right temperature 24/7.

# PASSIVE NETWORKS

## Data Centers

### CABINET RACKS

All sizes of network cabinet racks can be offered with using sufficient steel thickness and excellent accessories. Each rack has its own accessories such as Fans, PDU, Shelf and Wheels.

### UPS AND GENERATORS

To avoid sudden electricity cut-off, we supply and install electric generators with UPS (Uninterruptible Power Supply) system for the protection of all devices in your data rooms.

### ACCESS CONTROLS

"INOSYS" uses the latest access control devices to control and record the entry of people into your data rooms. You can use these access devices for time attendance too.

# ACTIVE NETWORKS

## SWITCHES

"INOSYS" consultants offer complete solutions along with box selling in setting up network and connectivity for clients, thereby offering solutions in the area of LAN, WAN and Wireless Networks.

## ROUTERS

Depending on the performance needs and security requirements of your business applications, many different solutions can be developed to create a private network between your enterprise and your business partners. (e.g. DLL, IP-VPN, ADSL, VPN)

## IP TELEPHONY SYSTEMS

Voice-Over-Data technology can be offered to integrate multiple voice and data networks into a single network. Customers can therefore combine voice and data traffic to maximize their return on investment.

# ACTIVE NETWORKS

## FIREWALLS

As part of our continuing effort to provide quality security services for our clients, "INOSYS" delivers advanced firewall security features across multiple platforms that protect your intranets and Virtual Private Networks (VPNs) from intrusions when connecting to the Internet or other Wide-Area Network (WAN) services.

## WIRELESS SOLUTIONS

We have certified engineers in network wireless field. They can offer the best solution to achieve the best wireless coverage in your site and to connect your sites together through wireless Point-to-Point technology up to 70 Kilometers. If you have an open area, "INOSYS" offers you the best way to cover it. This technology is called (Sector Technology). It provides coverage up to one square kilometer.

## CCTV

You can monitor all your departments and gates by having a CCTV system installed in your premises. We in "INOSYS" can provide you with a normal CCTV system (Including normal cameras & DVR or IP camera system to monitor your institution from any ware in the world.

# SERVERS & BACKUP

## SERVERS

Exceptional flexibility and expandability for growing businesses and superb at low-cost server consolidation with high performance and availability.

## BACKUP SYSTEMS

Most of us realize how important it is to backup files, but don't know how to do it. Today's backup software enables you to protect your data easier and more convenient than ever before giving you the tools to perform backups as your needs require. With our backup software offering, the data backup solutions are as diverse as the people who use them.

## BLADE SERVERS

Enable customer to run and consolidate mission critical applications in the flexible blade systems infrastructure. Such servers include 1 to 8 processors (depending upon business size).

# SERVERS & BACKUP

## STORAGE SOLUTIONS

1. Small & Medium Business (SMB) Online Storage Solution:  
SMB Storage technology are affordable and scalable to grow with your needs, and are flexible with the choice of FC, SAS, or iSCSI host connections.
2. Enterprise Storage Solution:  
Enterprise storage offers powerful and bulletproof with virtualized storage technology.

## DISASTER RECOVERY SITE

Disaster Recovery (DR) is the process, policies and procedures that are related to preparing for recovery or continuation of technology infrastructure which are vital to an organization after a natural or human-induced disaster.

# SOFTWARE

Centralized application management in the Data Center to reduce cost up to 50 percent and deliver instant and secure access to Windows applications over any network with the best performance.

Traditional distributed application management is extremely complex. Citrix XenApp enables IT to instantly deliver any Windows application to users anywhere on any device.

# SERVICES

## SERVICE LEVEL AGREEMENTS (SLA)

When you want to have rest in your IT equipment, you don't need to keep a big staff in your IT department. Just sign a Service Level Agreement (SLA) with "INOSYS" and we will take care of all your IT equipment.

## HELPDESK

We have our own operators to answering your calls 24/7. If you have any problem, just call our helpdesk staff and we will help you to close your issue immediately. Our operators are qualified to help you at least till our engineers can visit you to solve the problem completely.

## WORKSHOP

We have a workshop that is equipped with full equipment needed by the IT as well as our engineers and technicians inside and outside when visiting any client to solve their problems in the IT field.
