Virtual Healthcare. When You Need It.
 Wherever You Need It.

Company Overview

MelMedic is an online medical practice available to patients across the United States. Our team of board-certified practitioners is available seven days a week to provide general information, patient education, monitoring services, and medical care.

We offer primary care services for existing and newly diagnosed health conditions, focusing on prevention strategies. We can establish ongoing care and collaborate with current medical providers when needed.

Our telehealth visits are secure and encrypted, complying with HIPAA regulations for patient privacy. Our practitioners prioritize preventive care, proactively managing small problems to prevent them from becoming bigger ones.

We believe in making telehealth services practical and accessible, especially for underserved communities. By bringing healthcare into the comfort of a person's home or private area, we aim to normalize the healthcare setting and make it accessible for all.
