

# PBM Light

Therapeutic Red Light Therapy Devices

## Relieve pain. Promote healing.

### What is PBM Light Therapy?

PBM stands for *PhotoBioModulation*, which means light (photo) life (bio) and change (modulation). Before "PBM" became a prevalent industry term, prior to the 1990s, light therapy was recognized as a treatment modality known as low level laser therapy (LLLT). Oral IQ's PBM Light units provide the same therapeutic benefits as LLLT; restoring damaged tissues, relieving pain and reducing inflammation.

### When can PBM Light be used?

Oral IQ's PBM Light provides immediate relief to a wide range of joint, muscle and nerve pain. Applications range from treating TMJ and carpal tunnel syndrome, muscle pre-conditioning and rapid recovery from sports injuries (sprained ankles, friction burns) to pre-conditioning of dental surgical sites and post-op healing. PBM Light can also effectively manage many biological side effects of chemotherapy such as oral mucositis.

### Is PBM Light safe?

Absolutely! PBM Light is safe and effective without any side effects, having achieved full FDA regulatory approval as a Class 2 light therapy device and a K-100213 category medical device.

## WHERE DOES IT WORK?

TMJ & Jaws

Wrists & Arms

Knees Legs & Feet

Shoulders

## HOW DOES IT WORK?

PBM Light works at the cellular level stimulating mitochondria in your body's cells. Mitochondria, known as the "cellular powerhouse," are responsible for ATP production (energy units). When cells are energized they can perform their functions optimally, more efficiently and at generally higher levels.

### PBM Mechanism at the cellular level

ATP unit of energy

Mitochondria: The Powerhouse receives light energy & increases ATP production.
