

# CASE STUDY

## SCHOOLS & UNIVERSITIES

## EDUCATION & OUTREACH

### OVERVIEW

Planetary Health is a young and growing discipline. Engaging with the next generation of scientists, social scientists, public health experts, politicians, doctors, veterinarians, economists, etc. is critical to promote interdisciplinary thinking, a skill that will be essential to solving some of the next generation's largest problems. Biome PHS can speak at your school, organize volunteering trips, and bring Planetary Health right to your campus.

### INSPIRING THE FUTURE

#### OUR LARGEST PROBLEM

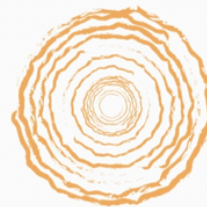

There is no doubt that disrupted natural systems, climate change, and the effects are the largest challenge of this century, affecting not only people, but the biome at large. Biome PHS teaches students what the big problems are, and how they might be solved.

#### OUR GREATEST HOPE

Our students are our future, and our greatest hope. Affirming that they can make a difference at any age is critical to their future success. Planetary Health needs inspired, and passionate leaders!

#### AN EMERGING FIELD

Planetary Health is growing by the hour. Telling students about this field and connecting with a Planetary Health professional might allow them to consider Planetary Health as a career choice.

# BIOME

PLANETARY HEALTH SOLUTIONS

### DELIVERABLES

#### PUBLIC SPEAKING EVENTS

A representative of Biome PHS would be happy to speak to your student body, sports team, after school club, etc. No matter the size of the group, we are happy to engage with students that are curious about how our environment impacts our health.

#### VOLUNTEERING/FIELD TRIPS

We believe that bringing students into the community, or the field, is one of the best teaching methods we can offer. Whether we are helping plant a riparian buffer on a local farm or catching mosquitos in the field, we will bring students along to show them the ropes of Planetary Health in action.

#### CAMPUS INSTALLMENTS

Biome PHS can make Planetary Health accessible to all students on campus. That might look like helping to initiate a campus farm or an ecological restoration effort, or even bringing a Planetary Health themed art installment to campus.

### CONCLUSION

Biome PHS understands the power of education and the promise of our next generation. We recognize our work in education and outreach as one of our most important programs. Let's explore what we can accomplish at your institution.
