

Boarding Ladders Checklist:

Make sure your tail wagger can get back on your boat!!

Considerations to look into before investing in a dog ramp:

- Durability, capacity & size of the ramp
- Size & weight of your tail wagger
- Ease of installation of the ramp
- Ease of transport of the ramp
- Slope & width of the ramp – can your dog climb easily up onto your boat?
- For smaller dogs do not buy a ramp that is too big
- Does the ramp have a non-slip surface
- What material is the ramp made out of for storage and care concerns – most ramps are made of rubber, plastic, aluminium or a combination of these products
- Consider alternative uses such as getting in and out of cars or climbing up on house furniture

Remember – your pup's weight is much denser in the water so take the extra weight into consideration!

Types of Ramps:

- Folding ramps
- Platform ramps
- Beavertail folding ramps
- Marine Dog boat ladder made with mesh material

We encourage you to do your research to find the ramp that fits your pup, your boat and you!
